

IR-01

Low-Cost Infrared Thermometer

- **Ergonomic and robust**
- **Fast and reliable**
- **Easy to operate**
- **Operating range -32°C...+500°C**
- **Adjustable emissivity from 20...100%**
- **Laser pilot light**

Description

Non-contact measurement of temperature with infrared thermometers is a modern, reliable and fast system of measuring temperatures.

The device measures the heat radiation originating from an object. From this, it determines the surface temperature while taking the emission factor of the object of measurement into regard. The emission factor is determined by the optical properties of the object of measurement and depends on the material and the surface characteristics of the object of measurement. Commonly used values for faint and non-translucent objects of measurement within the infrared range are estimated at approx. 0.95. For extremely reflecting objects the emission factors can be 0.3 to 0.2.

The IR-01 captures the temperature of a measuring spot that gets larger as the distance from the device increases. In this, a Laser pilot light facilitates the orientation of the thermometer and thus the determination of the exact location of measurement.

Range of application

Using infrared thermometers becomes necessary, if the object of measurement cannot be or should not be contacted for reasons such as:

- it is too far,
- it is moving,
- the object is under voltage,
- it is a toxic chemical,
- the object of measurement must remain sterile or
- it is too hot to allow measurement with a thermoelement.

Technical specifications

Operating range: -32°C...500°C (400°C)

Emissivity: adjustable from 20...100%

Accuracy: 1% of measuring value in °C + 1 Digit (2% of measuring value in °C + 1 Digit for IR-01.1)

Repeatability: 0.5% of measuring value in °C + 1 Digit (1% of measuring value in °C + 1 Digit for IR-01.1)

Temperature coefficient: 0.03% / K (at 23°C)

Response time t90: 0.3 s

Spectral range: 8...14 µm
(no effect due to water or CO₂)

IR-Detector: Thermopile

Display illumination: automatic

Temperature display: °C and °F adjustable,
Large display: 3-digit, 9 mm height
Small display: 4-digit, 4.5 mm height

Functions: Normal, max, min, mean value (AVG), deviation from starting value (DIF), continuous measuring with locking lever, automatic cut off

Display resolution: 0.1 K of -10°C...200°C in AVG mode, 1 K in other type of measuring

Working temperature: 0...55°C / 32...131°F

Supply: 9 V Battery

Viewing device: Laserpilot light (only IR-01.2)

Weight: 320 g (including battery)

Housing material: ABS

Protection class: IP 20

Battery life (alkaline batteries): 25 h

Optics

Ordering codes

Ordering number:

IR-01. 1.

Infrared Hand-Held Thermometer

Version

1 = operating range -32°C...+400°C, emissivity can be adjusted

2 = operating range -32°C...+500°C, emissivity can be adjusted

3 = operating range -32°C...+600°C, emissivity can be adjusted

4 = operating range -32°C...+800°C, emissivity can be adjusted
