

FLOW 2025

OVERVIEW

DK-01

Low-Cost Piston Type Flow Switch for Low Flow Volumes with Cable Connection

Description:

The DK-01 series of compact piston type flowswitches operates according to a modified variable area principle and is used for monitoring the flow of low-viscosity fluids. In this method, a piston equipped with a built-in permanent magnet, is held in a defined position by a spring. Depending on the rate of flow, the medium slides the piston against the strength of the spring. If the flow exceeds or drops below of the present set-point, the reed switch outside the medium is activated without contact via the permanent magnet.

Features

- / For low-viscosity fluids
- / Fixed factory-set setpoint
(between 0.1 and 2.5 l/min)
- / Compact construction
- / Easy to install
- / Cost effective
- / Mounting in any position
- / Reed contact output

Application:

The DK-01 series is used for monitoring the flow of low-viscosity fluids in pipes. They offer a reliable solution for ensuring the minimum flow rate and thereby protecting high-quality systems and installations from damage. For applications with contaminated media or media with ferritic components, we recommend the use of strainers (for example the FT-01, a strainer with or without magnetic separator in the section accessories) of our catalogue.

Typical applications are:

- / Coolant circulation systems
- / Lubricant circulation systems
- / Water circulation systems

Technical Specifications:

Set-point range /	0.1 .. 2.5 l/min
Switching hysteresis /	ca. 0.1 l/min
max. Pressure /	25 bar, higher on request
max. Media temp. /	+100°C
max. Ambient temp. /	+70°C
Process connection /	R 1/4"-female thread or hose nozzle for 8 mm flexible tube, other on request
Mounting position /	any
Materials (wetted parts) /	
Body housing:	brass or stainless steel, other on request
Piston:	POM
Spring:	stainless steel 1.4410
Magnet:	hard ferrite OX 300

Dimensions in mm:

Piston type flowswitch with 8 mm hose nozzle at both sides

Piston type flowswitch with R 1/4" female thread at both sides

Electrical Specifications:

Electrical connection /	stranded wire 2-core, 0.5m cable
Contact /	reed contact, NO-contact
max. Switching voltage /	200 V
max. Switching current /	1 A
max. Switching load /	15 W

Handling:

- / It must be ensured, that the values given for voltage, current, and power are not exceeded.
- / When switched on, a load must be connected in series.
- / The electrical details apply to resistive loads. Capacitive, inductive and lamp loads must be operated using a protective circuit.
- / An inflow section of 10 times and an outflow section of 5 times of the nominal pipe diameter is recommended. Therefore our „BE-01 - Inflow and Outflow Sections for Flowmeters“ may be used.

SA-01

Flow Indicator with or without Rotor, with Wiper for Self-Cleaning

Features

/Gases

/Low viscous liquids

/ Small dimensions for assembly

/ Brass and stainless steel versions

/ Any mounting position

/ Optionally, with or without rotor

Visual indicating of flow

/ With internal wiper blades for
internal cleaning of the sight glass

Description:

The SA-01 series of flow indicators is intended for visual indication of flow through a pipe. The medium passing through it can be viewed through a sight glass. Optionally, a rotor placed into the flow is set into motion by the medium which serves as a visual confirmation of the flow. Wiper blades mounted in the device get pressed inside against the sight glass. By simply rotating the sight glass manually, the inside can be cleaned of deposits, formation of algae or calcification without the need to interrupt the process. Thus, elaborate maintenance and cleaning operations can be dispensed with.

Application:

The SA-01 series of flow indicators is deployed for monitoring fluids of low and medium viscosities (up to 150 cSt) in pipes. Optionally the unit can indicate the flow of gases and is equipped with ball bearings in this case.

Technical Specifications:

max. Pressure /	16 bar
Pressure drop at Qmax. /	
SA-01.1:	on request
SA-01.2:	0.25 bar at Qmax
Media temperature /	SA-01.1: 0...+100°C SA-01.2: 0...+100°C

DA-01

Sight Flow Indicator

Features

- / Buckle-free glass-mounting
- / Large inspection window
- / High temperature range
- / Reading possible on both sides
- / Visual evaluation of media
- / Excellent media compatibility

Description:

The DA-01 series of flow indicators is meant for visual and quantitative control on fluid measuring substances. The device has large surfaced sight glasses fitted on both sides and provided with a graduated scale. A fine polished stainless steel flap fitted within the flow area gets lifted by the flow of media and, depending on the volume of flow, shows the current rate of flow on the scale. The flap is mounted on a stainless steel axis and operates with fine linearity purely depending on the gravitation. The DA-01 can be mounted vertically as well as horizontally. Due to its high temperature resistance it can be deployed in many ways.

Application:

Flow indicators are deployed for visual and quantitative control of fluid and gaseous media. The device has versatile applicability, especially in the construction of equipment, in process measurement technology or as general monitoring of compressors, cooling subassemblies, blowers and others.

DA-02

Sight Flow Indicator

Features

- / Buckle-free glass-mounting
- / Large inspection window
- / High temperature range
- / Reading possible on both sides
- / Visual evaluation of media
- / Excellent media compatibility

Description:

The DA-02 series of flow indicators is intended for visual monitoring of fluid and gaseous media. The measuring medium lifts a Teflon® ball resting on the valve of the housing. As the volume of flow increases the ball becomes visible in the dome made of borosilicate glass. From its position, it is possible to draw a conclusion on the current volume of flow. The device is suited for mounting it horizontally with its dome showing upwards.

Application:

Flow indicators are deployed for visual and quantitative control of fluid and gaseous media. The device has versatile applicability, especially in the construction of equipment, in process measurement technology or as general monitoring of compressors, cooling subassemblies, blowers and others.

DA-04

Plastic Sight Flow Indicator

Features

- / Air and Gases
- / Small dimensions for assembly
- / Resistant to many chemicals
- / Any mounting position
- / Temperature max. 80°C
- / Pressure max. 10 bar

Description:

The DA-04 Series Flow Indicators are designed to provide a visual indication of flow through a pipeline and are very rugged with good structural integrity. The position and the centrifugal movement of the rotor and the liquid state of the medium can be observed through the polycarbonate outer wall. The rotor is used here as an indicator of how strong the flow is, since the number of revolutions of the rotor increases with increasing flow.

Application:

The DA-04 flow indicators are used to monitor gases or liquids with low and medium viscosities (up to 150 cSt) in pipelines.

Areas of application:

- Water
- Oil
- Coolants
- Chemicals
- Air and gases
- Corrosives

Technical Specifications:

- max. Pressure / 10 bar
- max. Media temperature / 80°C
- Materials /**
 - Housing: polycarbonate
 - Spindle: stainless steel Ø 4mm
 - Impeller: PPS
 - Seals: Viton

SA-05

Sight Flow Indicator with Female Thread in Gray Cast Iron, Steel Casting or Stainless Steel

Features

- / Temperature up to 280°C
- / G1/4" to G2"
- / PN16, PN25 or PN40
- / Indicator with flap, drip tube or rotor
- / Optionally with NPT connection

Description:

Flow indicators are intended for visualization of flows in pipes. In the case of SA-05, a drip tube or a rotating plastic rotor or a movable flap are viewed through two glasses mounted in a robust flow armature for visual control of flow. Air bubbles and solid particles flowing along or the rotor's rotation speed and the position of the deflected flap enable the observer to quantitatively estimate the volume of flow.

Application:

The SA-05 series of flow indicators possesses a cylindrical female thread connection which can also be designed as a conical NPT thread. They can be deployed for up to 40 bar of maximum pressure and 280°C maximum temperature. The range of materials available includes gray cast iron, steel casting or stainless steel with soda-lime or borosilicate glass. Due to these properties the SA-05 is mainly deployed in the entire manufacturing and processing industry.

Technical Specifications:

Materials /	gray cast iron GG25 or steel casting GS-C25 or stainless steel 1.4408
Cover /	GG25 for gray cast iron version GS-C25 for steel casting version 1.4408 for stainless steel version

SA-06

Sight Flow Indicator with Flange Connection from Gray Cast Iron, Steel Casting or Stainless Steel

Features

- / Temperature up to 280°C
- / Diameters DN15. . .DN200
- / PN16, PN25 or PN40
- / Display with flap, drip tube or rotor
- / Optionally with ANSI flanges

Description:

Flow indicators are intended for visualization of flows in pipes. In the case of SA-06, a drip tube or a rotating plastic rotor or a movable flap are viewed through two glasses mounted in a robust flow armature for optical control of flow. Air bubbles and solid particles flowing along or the rotor's rotation speed and the position of the deflected flap enable the observer to quantitatively estimate the volume of flow.

Application:

The SA-06 series of flow indicators possesses a flange connection of DIN or ANSI standards. They can be deployed for up to 40 bar of maximum pressure and 280°C maximum temperature. The range of materials available includes gray cast iron, steel casting or stainless steel with soda-lime or borosilicate glass. Due to these properties the SA-06 is mainly deployed in the entire manufacturing and processing industry.

Cover shape /	DN15 to DN50 square DN65 to DN200 round
Screws /	4.6 / 5.6 vz for gray cast iron and steel casting A4-70 for stainless steel version
Optical display /	drip tube for display of least volumes or flap made of stainless steel 1.4571 or rotor made of POM or rotor made of PTFE
Glass material /	NaCa (soda-lime) glass DIN 8902 up to max. 150°C or borosilicate glass DIN 7080 up to max. 280°C
Seals /	Graphite (others on request)
Process connections /	DN15 to DN200 flange as per DIN or ANSI
Pressure /	PN16, PN25 or PN40 and 150 lbs./300 lbs. for ANSI standard
Media temp. /	SA-06. (1 or 2) max. 150°C for NaCa glass, 280°C for borosilicate glass SA-06.3 max. 120°C SA-06.4 max. 260°C
Mounting /	horizontally or vertically, for attention to flow direction

¹ 235 for PN25/40

* in GG 25 not available

² 270 for PN25/40

** 16 bar only available with borosilicate glass

³ 300 for PN25/40

> DN 100 & PN 40 in accordance with DIN 3237

⁴ 360/375 for PN25/40

SA-10

Flow Indicator from Stainless Steel or Bronze

Features

/ Reasonable pricing

/ Up to 16 bar

/ Up to 200°C

/ Low pressure drop

/ Wide flow range

/ Nominal widths from DN8. . .DN40

Description:

Profimess' flow indicators SA-10 offer a cost-effective solution wherever it is important to recognize flow condition in pipes of nominal widths from 8. . .40 mm at a glance. The ratio between maximum and minimum flow is exceptional and the pressure drop is low even at the end of the recommended flow range. The sight flow indicators SA-10 work both horizontally and vertically and inverted flow can pass through them.

Application:

The selectable material combinations stainless steel and bronze predetermine the flow indicators SA-10 for 'aggressive media applications'. Even the indication of a marine water flow or the operation within a saline environment is easily possible, because bronze, as against stainless steel, aluminium or brass, is one of the rare metals resistant against salt water and oceanic climate. The units serve of course also water, oil, lubricants, coolants and many more fluids. A further benefit of using sight flow indicators of SA-10 series is, that the user can not only estimate the flow velocity in the pipe, but also get an impression of fluid condition. This enables him to recognize at an early stage, if e.g. overheating or a leak cause a color change or a pollution of the flowing liquid.

Technical Specifications:

Materials /

Body:	stainless steel 316 ASTM-A-351-2000 GR CF8M or bronze BS EN1982 CuSn5Zn5PB5-C-GS (formerly LG2)

SP-01

Vane operated Flowswitch

Features

/ With or without T-piece,

for pipe sizes of 1/4" to 6"

/ Brass, stainless steel and PVC
designs with T-piece

/ Low pressure drop

/ Reed contact or
micro-switch versions

Description:

The SP-01 series of flowswitches operates according to the proven principle of a displaced vane. The flowing medium strikes the baffle disc mounted at the end of a pendulum. The resulting dynamic pressure deflects the pendulum. Subsequently, a permanent magnet mounted at the other end of the pendulum switches an adjustable reed contact. Different setpoints can be achieved by shifting the reed contact situated outside the medium.

Application:

The SP-01 series of vane flowswitch is suited for monitoring setpoints in low-viscosity fluids. Normally, the setpoint is adjusted during the process. As an option a version of the SP-01 flowswitch is available, that can be applied to explosion-proof areas. These units do not need any certification, because they are, according to the realised estimation of the risk of ignition, no ignition source and therefore not part of the ATEX directive. These switches are always equipped with a blue connection cable of 1.5 m length.

SP-03

Low-Cost Vane Operated Flowswitch with Cable Connection

Features

- / With T-piece or screw-in thread
- / For pipe sizes of 3/8" up to 6"
- / T-pieces from brass, st. steel or PVC
- / Cost effective
- / Independent of pressure
- / Low pressure drop
- / Stainless steel pendulum system
- / Simple exchangeability of the entire pendulum system

Description:

The SP-03 series of vane operated flowswitches operates according to the proven dynamic pressure principle. If the flowing medium strikes the pressure plate at the lower end of the pendulum, the pendulum system is moved. This action is supported by a pretensioned leaf spring. Therefore it can be operated without friction. A permanent magnet attached to the upper end of the pendulum system operates a reed contact which is sealed against the flow medium. Different setpoints can be achieved by shifting the reed contact situated outside the medium.

Application:

The SP-03 device type has proven itself to be a simple, reliable and cost-effective solution for monitoring setpoints in low-viscosity liquids. Normally, the setpoint is adjusted during the process. However, on request fixed setpoints can be pre-set at factory for rising or falling flows.

SP-04

Digital Flowmeter/Switch with Way-Deflection-System

Features

- / 4...20 mA or 0...10 V DC output
- / Optional RS 232 interface
- / Totalizer
- / 2 separately adjustable switching contacts
- / Soil-resistant
- / For pipes up to DN600
- / LCD display for flow & total volume
- / Operating range 1:10

Description:

Profimess' measuring device SP-04 is a flow transmitter with a digital display of the current flow, analogue output, totalizer, voltage output and two adjustable switching relays with display of the setpoints for monitoring the flow rate. An RS 232C interface is optionally available. The flowing medium moves a baffle plate mounted to a pendulum and thus generates the measured displacement. The spring-loaded pendulum alters its position depending on the flow. The position of a magnet fixed to the pendulum is recorded by a Hall sensor located outside the measuring chamber and transmitted to the microchip-controlled electronics where it is processed. This 2-chamber system ensures that no fluid can penetrate the electronics housing even if the device is defective.

Application:

The SP-04 series of flowmeters and -switches is used for detection of thin-bodied media in nominal diameter ranges up to DN600. Particularly in the range of DN50 upwards the extremely cost-effective price-performance ratio is perceptible. Measurement by means of a baffle plate is independent of the conductivity of the medium due to which also glycol, oils and other hydrocarbons can be captured without problems. The SP-04 can be adapted to a large number of processes thanks to different material combinations.

Technical Specifications:

DP-10N

Vane operated Flowswitch

Features

- / Proven technology
- / Easy to install
- / Low pressure drop
- / Brass and stainless steel
- / Good repeatability

Description:

The DP-10N series of flowswitches transmits the movement of the vane mounted in the pipe which is proportional to the flow over a spring-supported rocker mechanically to a high-performance micro-switch. The setpoint can be modified by customizing the spring tension. The 3 standard vanes can be deployed for a nominal diameter range of 1" to 3". A fourth vane can be customized for larger nominal diameters or for reducing the switching values by shortening it to a desired length. In addition, the DP-10N can be supplied designed for a reduced adjustment range so that it can be deployed also for minimum switching values.

Application:

The DP-10N vane switches are used wherever fluid or air flows need to be reliably monitored. The switches are used for monitoring minimum as well as maximum flow. Typical areas of application include monitoring of coolant and lubricating circulation, protection against dry-runs in pumps or safeguard against defects. The DP-10N is designed as robust device to allow its use across the entire industry.

DP-10LC

Vane operated Flowswitch

Features

- / Proven technology
- / Easy to install
- / Low pressure drop
- / Brass and stainless steel
- / Good repeatability
- / Low cost
- / For water or air

Description:

The DP-10LC series of flowswitches transmits the movement of the vane mounted in the pipe which is proportional to the flow over a spring-supported rocker mechanically to a high-performance micro-switch. The setpoint can be modified by customizing the spring tension. The 3 standard vanes can be deployed for a nominal diameter range of 1" to 3". A fourth vane can be customized for larger nominal diameters or for reducing the switching values by shortening it to a desired length. In addition, the DP-10LC can be supplied designed for a reduced adjustment range so that it can be deployed also for minimum switching values.

Application:

The DP-10LC vane switches are used wherever fluid or air flows need to be reliably monitored. The switches are used for monitoring minimum as well as maximum flow. Typical areas of application include monitoring of coolant and lubricating circulation, protection against dry-runs in pumps or safeguard against defects. The DP-10LC is designed as robust device to allow its use across the entire industry.

DP-20/30

Vane operated Flowswitch

Features

/ Easy to assemble

/ Cost-effective

/ Reliable

/ Excellent strength

/ For fluids and air

Description:

The DP-20 model is unique due to its simple but reliable design. An external magnet actuates a switch that is fully protected within a leak-proof housing. The body and the vane are manufactured of chemically resistant polyphenylene sulphide. The vane which can be shortened has well-sculpted divisions for pipes of DN 25 to DN 150.

The DP-30 model is smaller and more compact than the DP-20 and it is available in brass or stainless steel versions on account of which the switch can be deployed for pressure levels up to 138 bar. A unique switch setting enables a quick change-over of the contact function. By releasing two screws and subsequently shifting the shedded reed contact either of the NC-contact or the NO-contact functions can be selected. The vane has a shortening pattern that indicates at which point it must be separated for the 6 pipe nominal diameters of 1/2" to 2".

The DP-20 as well as the DP-30 indicate the correct flow direction of the medium over an indexing arrow on the body side.

Application:

Vane switches offer a simple and cost-effective method of monitoring the flow of a medium. The vane moved by dynamic pressure switches an electrical contact magnetically when the flow exceeds or falls a certain value. This type of monitoring flow is successfully used in the entire industry wherever the media being monitored do not indicate any significant levels of pollution or too high speeds of flow.

DP-20 Vane Operated Flowswitch made from Plastic

Technical Specifications:

Wetted materials /

Vane and body:	PPS
Pin and spring:	316 SS or Inconel®
Magnet:	Ceramic 8

max. Pressure / 10 bar

max. Media-temp. / +100°C

Process connection / 1" NPT-male

Weight / 130 g

Installation / with arrow in direction of flow

Mounting position / Actuation/deactuation flow rates are based on horizontal pipe position and are nominal values. The device can not be used vertically.

Electrical Specifications:

Contact /

Standard	max. 5 A at 250 VAC resistive max. 3 A at 30 VDC inductive

DP-40

Vane operated Flowswitch for heavy-duty applications

Features

- / Leak proof body
- / Free-Swinging vane
- / Electrical unit can be replaced
- / Thread, tee or flange installation
- / Field adjustable multilayer vane
- / Up to 1000 or 2000 psig
- / 5000 psig on special request
- / Weatherproof NEMA4
- / ATEX or IECEx

Description:

The DP-40 Flow Switch is rugged and reliable, ideal for automatically protecting equipment and pipeline systems against damage from reduction or loss of flow. A unique magnetically actuated switching design gives superior performance. There are no bellows, springs, or seals to fail. Instead, a free swinging vane attracts a magnet within the solid metal switch body, actuating a snap switch by means of a simple lever arm. Time tested in thousands of pipeline installations and processing plants around the world this series is weatherproof, designed to meet NEMA 4 and explosion-proof (listing included in specifications). The DP-40 can be used in pipes 1 1/2" and up.

Application:

- / Protects pumps, motors and other equipment against low or no flow
- / Controls sequential operation of pumps
- / Automatically starts auxiliary pumps and engines
- / Stops liquid cooled engines, machines and processing when coolant flow is interrupted
- / Shuts down burner when air flow through heating coil fails
- / Controls dampers according to flow

Actuation rates are based on cold water at a specific gravity of 1.0.

For fluids of different specific gravity, actuation rates may be approximated by dividing the rate shown by the square root of the specific gravity.

Approximate Actuation/Deactuation Flow Rates for Cold Air; SCFM (LPS)

Actuation rates are based on air at standard conditions.

For gases at other pressures, temperatures, or specific gravities, consult factory for equivalent flow approximations.

FL-01

Diaphragm Flow Meter

Description:

The FL-01's body contains a thin, elastic diaphragm, made of stainless steel, which covers the entire flow cross-section. It is bent through the flowing liquid, until it touches a bow-shaped stopper. The magnetic field of a plastic-encapsulated magnet, sitting right on the diaphragm, is detected by an external sensor. The optional available measuring-transducer, installed on the outside of the housing, owns a back-lit, well-readable LCD-Display, which shows measured values and parameters in a clear and easy to understand way. The FL-01 has either a 0...10 VDC- or 4...20 mA-output-signal and two switching outputs which can be used as PNP- or NPN-transistor-outputs, if needed. The device can be controlled and programmed with a magnet ring. By turning the ring left or right, parameters, such as hysteresis or switching points, can easily be changed.

A further option, the electronic unit can be ordered as a counter, with external reset, antivalent switching-outputs and current-value display, or, as a current-value display with analogue output, volume-pulse-output and counter.

Features

- / Analogue output
- / 2 switching outputs
- / Well-readable, back-lit display
- / Changeable dimensions
- / For industrial applications
- / Small and compact in size
- / Easy installation

Application:

The new developed measuring-system of the FL-01 offers, by the fact, that it manages without any bearing a very good reproducibility and is practically free of hysteresis. In addition, the response time of the measurement is extremely small, due to the small mass of the spring diaphragm and the nearly complete coverage of the flow cross section. Therefore the instruments allows the detection of even the smallest starting values and a large measuring range of up to 1:100. Compared to some other principles of flow measurement, e.g. the calorimetric or the impeller system, the dynamics of the entire flow cross-section are detected in the FL-01 and not just a supposedly representative point in the center or at the edge of the flow profile. Straight inlet and outlet sections have a considerably less influence on the measurement result. The FL-01 connectors on the input and output sides are flanged to the measuring system at the factory, so if the device needs to be serviced, the connecting screws can be removed easily from the flange and the measuring-unit removed, without removing the connectors from the pipe. This flowmeter is a universally applicable, robust instrument, which is used in the entire industry. The excellent price-performance ratio and its multitude of technical advantages make it economically viable at many measuring points to replace old technologies, such as impeller or turbine flowmeters, with the FL-01.

Technical Specifications:

FL-10

Flow Rate Indicator

Features

- / For liquid media
- / For media viscosities up to 600 cSt
- / Pressure up to 200 bar max.
- / Mechanical flow indication
- / Weatherproof enclosure box (IP65)
- / May be installed in any position
- / Size range from 1/4" to 8"
- / Adjustable under operating conditions
- / ATEX approved Explosion-proof models available

Description:

A spring loaded stainless steel flap inside the FL-10 is rotated around a symmetrical axis due to the upcoming flow and opens therefore a variable aperture. This rotation moves the mechanically coupled pointer on the clearly visible flow scale of the FL-10 proportional to the flow. The rotary motion can be used for mechanical display only, for switching a microswitch when the adjusted setpoint is reached or even to put out a 4...20 mA analogue output. The FL-10 can easily be used within potentially explosive atmospheres thanks to its ATEX approvals for the switching unit and the output module. The unique construction of the FL-10 allows an installation in any mounting position.

Application:

The FL-10 side flow indicators with flap are among the most robust flowmeters on the market. In theory, the user can completely disassemble and reassemble the device on site without any functional restriction. The devices are durable, accurate, and versatile. There are many material combinations for a variety of liquid media and sizes from DN10 to DN200, as well as pressure levels up to 200 bar. Larger variants can be supplied for intermediate flange mounting (sandwich) on request. Various options for the electrical outputs of the indicators predestine the FL-10 series against many other sight flow indicators and offers the customer a perfect industrial product.

SW-01

Miniature Variable Area Flowmeter and Switch

Features

- / Small dimensions for assembly
- / Brass and stainless steel versions
- / Scales for water and air
- / Mounting in any position
- / Highly accurate switching
- / Very low switching hysteresis

Description:

The SW-01 series of flowmeters and switches operates according to a modified variable area principle. Using a spring, the float is introduced into a cylindrical sight glass. The flowing medium moves the float in the direction of flow and the upper edge of the float indicates the flowing volume on the scale mounted on the sight glass. A reed contact is situated outside the device. This reed contact is infused in a stepless adjustable housing and thus protected from external influences. When the float reaches along with its integrated magnet the position of the reed contact, the contact blades get closed. If the volume of flow is higher the float continues to move (maximum up to the stopper that prevents overriding of the operating range). This ensures a bistable switching action at any time.

Application:

The SW-01 series of variable area flowmeters and switches is intended for measuring and monitoring low-viscosity fluid or gaseous media, for example, in cooling systems for welding machines, laser and pipe installations, pump monitoring, compressors and so on. In actual application, a switching hysteresis of only 0.5-1.5 mm float stroke has been achieved by careful selection of the reed contacts being used.

Miniature Variable Area Flowswitch

Features

- / Small dimensions for assembly
- / Brass and stainless steel versions
- / Scales for water and air
- / Mounting in any position
- / Highly accurate switching
- / Very low switching hysteresis

Description:

The SW-02 series of flowswitches operates according to a modified variable area principle. Using a spring, the float is introduced into a cylindrical hole. The flowing medium moves the float in the direction of flow and the upper edge of the float corresponds to the scale mounted on the body of the SW-02. A reed contact is situated outside the device. This reed contact is infused in a stepless adjustable housing and thus protected from external influences. When the float reaches along with its integrated magnet the position of the reed contact, the contact blades get closed. If the volume of flow is higher the float continues to move (maximum up to the stopper that prevents overriding of the operating range). This ensures a bistable switching action at any time.

Application:

The SW-02 series of variable area flowmeters and switches is intended for measuring and monitoring low-viscosity fluid or gaseous media, for example, in cooling systems for welding machines, laser and pipe installations, pump monitoring, compressors, high-pressure cleaners and so on. In actual application, a switching hysteresis of only 0.5 .. 1.5 mm float stroke has been achieved by careful selection of the reed contacts being used.

Variable Area Flowmeter and Switch

Features

- / Compact design
- / Brass and stainless steel versions
- / Scales for water and air
- / Highly accurate switching
- / Very low switching hysteresis
- / Robust design without glass measuring tube
- / Suitable for high operating pressures

Description:

The SW-04 series of flowmeters and switches operates according to a modified variable area principle. The float is introduced into a cylindrical slit nozzle. The flowing medium moves the float in the direction of flow. An externally mounted indicator instrument is magnetically coupled with the float and indicates the flowing volume on the scale mounted on a scale. A reed contact is situated outside the device. This reed contact is infused in a stepless adjustable housing and thus protected from external influences. When the float reaches along with its integrated magnet the position of the reed contact, the contact blades get closed. If the volume of flow is higher the float continues to move maximum up to the stopper that prevents overriding of the operating range. This ensures a bistable switching action at any time.

Application:

The SW-04 series of variable area flowmeters and switches is intended for measuring and monitoring low-viscosity fluid or gaseous media, for example, in cooling systems for welding machines, laser and pipe installations, pump monitoring, compressors, pump circulation, high pressure installations and so on.

SW-05

Variable Area Flowmeter and Switch, Mounting Position Independent

Features

**/ Any mounting position,
no need of recalibration**

/ Compact design

/ Brass and stainless steel versions

/ Highly accurate switching

/ Very low switching hysteresis

**/ Non-abrasive burnt-in
scale on sight glass**

Description:

The SW-05 series of flowmeters and switches operates according to a modified variable area principle. Using a spring, the float is introduced into a cylindrical slit nozzle. The flowing medium moves the float in the direction of flow and the upper edge of the float indicates the flowing volume on the scale mounted on the sight glass. A reed contact is situated outside the device. This reed contact is infused in a stepless adjustable housing and thus protected from external influences. When the float reaches along with its integrated magnet the position of the reed contact, the contact blades get closed. If the volume of flow is higher the float continues to move maximum up to the stopper that prevents overriding of the operating range. This ensures a bistable switching action at any time.

Application:

The spring action and magnetic float ensure absolute functional safety. Due to the spring mounted inside that presses the float in the opposite direction of flow into its initial position, the device can be deployed in any mounting position. No readjustment is required as the artificially matured spring is under pretension. The SW-05 series of variable area flowmeters and switches is intended for measuring and monitoring low-viscosity fluid, for example, in cooling systems for welding machines, laser and pipe installations, pump monitoring, compressors and so on.

SW-06

Variable Area Flowmeter and Switch, Mounting Position Independent, High Pressure Type

Features

- / Any mounting position,
no need of recalibration
- / Compact design
- / Brass and stainless steel versions
- / Highly accurate switching
- / Very low switching hysteresis
- / Robust design without sight glass
- / Suitable for high operating pressures

Description:

The SW-06 series of flowmeters and switches operates according to a modified variable area principle. The float is introduced into a cylindrical slit nozzle. The flowing medium moves the float in the direction of flow. An externally mounted indicator instrument is magnetically coupled with the float and indicates the flowing volume on the scale mounted on a scale. A reed contact is situated outside the device. This reed contact is infused in a stepless adjustable housing and thus protected from external influences. When the float reaches along with its integrated magnet the position of the reed contact, the contact blades get closed. If the volume of flow is higher the float continues to move maximum up to the stopper that prevents overriding of the operating range. This ensures a bistable switching action at any time.

Application:

The spring action and magnetic float ensure absolute functional safety. Due to the spring mounted inside that presses the float in the opposite direction of flow into its initial position, the device can be deployed in any mounting position. No readjustment is required as the artificially matured spring is under pretension. The SW-06 series of variable area flowmeters and switches is intended for measuring and monitoring low-viscosity fluids, for example, in cooling systems for welding machines, laser and pipe installations, pump monitoring, compressors etc.

SW-07

Variable Area Flowmeter and Switch

Features

- / For viscous media from
30 cSt up to 600 cSt
- / Any mounting position,
no need of recalibration
- / Compact design
- / Brass and stainless steel versions
- / Highly accurate switching
- / Very low switching hysteresis
- / Non-abrasive burnt-in scale on glass

Description:

The SW-07 series of flowmeters and switches operates according to a modified variable area principle. Using a spring, the float is introduced into a cylindrical slit nozzle. The flowing medium moves the float in the direction of flow and the upper edge of the float indicates the flowing volume on the scale mounted on the sight glass. A reed contact is situated outside the device. This reed contact is infused in a stepless adjustable housing and thus protected from external influences. When the float reaches along with its integrated magnet the position of the reed contact, the contact blades get closed. If the volume of flow is higher the float continues to move maximum up to the stopper that prevents overriding of the connecting range. This ensures a bistable switching action at any time.

Application:

The spring action and magnetic float ensure absolute functional safety. Due to the spring mounted inside that presses the float in the opposite direction of flow into its initial position, the device can be deployed in any mounting position. No readjustment is required as the artificially matured spring is under pretension. The strong pretension of the spring in combination with an aperture in the float limit the effect of the medium's viscosity fluctuations to a minimum in comparison with other normal float flowmeters. The SW-07 series of variable area flowmeters and switches is intended for measuring and monitoring viscous fluids, for example, in centrally controlled lubrication systems, oil circulation lubrication systems, transformer oils and so on.

SW-08

Viscosity-Compensated Variable Area Flowmeter, independent of Mounting Position, High-Pressure Version

Features

- / For viscous media from
30 cSt up to 600 cSt
- / Any mounting position,
no need of recalibration
- / Compact design
- / Brass and stainless steel versions
- / Highly accurate switching
- / Very low switching hysteresis
- / Robust design without sight glass
- / Suitable for high operating pressures

Description:

The SW-08 series of flowmeters and switches operates according to a modified variable area principle. The float is introduced into a cylindrical slit nozzle. The flowing medium moves the float in the direction of flow. An externally mounted indicator instrument is magnetically coupled with the float and indicates the flowing volume on a scale. A reed contact is situated outside the device. This reed contact is infused in a stepless adjustable housing and thus protected from external influences. When the float reaches along with its integrated magnet the position of the reed contact, the contact blades get closed. If the volume of flow is higher the float continues to move maximum up to the stopper that prevents overriding of the connecting range. This ensures a bistable switching action at any time.

Application:

The spring action and magnetic float ensure absolute functional safety. Due to the spring mounted inside that presses the float in the opposite direction of flow into its initial position, the device can be deployed in any mounting position. No readjustment is required as the artificially matured spring is under pretension. The strong pretension of the spring in combination with an aperture in the float limit the effect of the medium's viscosity fluctuations to a minimum in comparison with other normal float flowmeters. The SW-08 series of variable area flowmeters and switches is intended for measuring and monitoring viscous fluids, for example, in centrally controlled lubrication systems, oil circulation lubrication systems, transformer oils and so on.

ST-01

Analogue Transmitter for Variable Area Flowmeters from the SW series

Features

/ Additional analogue signal

/ Easy solution

/ Economic

Description:

The analogue transmitter ST-01 will be simply installed on the outside of a VA flowmeter. A hall-effect sensor detects the magnetic floaters position inside the measuring device and sends out an analog signal of 4...20 mA or 0...10 V. The signal can then be used by most common devices. The transmitter is installed and configured on new flowmeters from factory. It is available for any VA flowmeter of the SW-series (SW-01 to SW-08).

Application:

The ST-01 Signal can be used e.g. for alarm functions. Its main task, however, is to forward the current flow value with the signal.

Technical Specifications:

Accuracy /	± 1 % of full scale ¹
Operating temp. /	-20...70 °C
Storage temp. /	-20...80 °C
Repeatability /	tbd.
Housing /	aluminium, blue anodized (optional 1.4571)

¹ The actual accuracy depends on the flow sensor used.
On request the accuracy of the flow sensor used can be significantly increased by a customized calibration.

Electrical Specifications:

Analog output /	4...20 mA or 0...10 V
Power supply /	24 VDC (19...30 VDC)
Power consumption /	< 1 W
Current output /	max. load 600 Ω
Power output /	max. current 10 mA
Connection /	round plug M12x1, 5-wire
Protection class /	IP 65 & IP 67

Dimensions in mm:

Connections:

Attention: Pin 5 must not be electrically connected! We strongly recommend use of a four core cable.

SM-06N

Variable Area Flowmeter made of Acrylic

Features

- / Local indication without auxiliary power supply
- / Excellent readability
- / Compact design
- / Scales for water and air
- / Process connection of brass or stainless steel
- / Optional with regulating valve
- / Accuracy class 3.0 or 5.0

Description:

SM-06 variable area flowmeters operate according to the variable area principle in which the measuring element such as a stainless steel ball can move in a conical flow tube in vertical direction. When the medium being measured begins to flow from bottom to top, the float, too, moves to top until a dynamic equilibrium of forces freezes it at a certain height. The position that the float reaches in this manner is proportional to the volume flow. The scale value that can be read at the center of the measuring ball, therefore, corresponds to the flow rate. If the excessive volume of flow needs to be regulated, the SM-06 provides optionally a regulating valve to easily allow flow volume control.

Application:

Variable area flowmeters made of acrylic are a cost-effective alternative to glass-made devices. Especially users in the fields of:

- Machine construction
- Medical engineering
- Pharmaceutical industry
- Chemical industry and in
- Research & Development

Where flow indicators are used in large numbers for simple applications and maximum accuracy is not a decisive factor, stand to benefit from this. An important aspect while assembling these devices is that the flow must always be from bottom to top and the medium is free from abrasive solid particles which, otherwise, may cause scratches inside the plastic tube and render it opaque.

Technical Specifications:

Media /	compatible gases and liquids
Process connection /	1/8"-IG NPT. Version 2: W80 and W81 GPM water have 1/4" NPT back-connections or 3/8" NPT end-connections. These versions aren't available with brass valves.

SM-10

Variable Area Flowmeter with Sight Glass for Small Flow Volumes

Features

- / Indication without power supply
- / For fluids and gases
- / Brass or stainless steel
- / With built-in needle valve
- / Alarm output on request
- / Accuracy class 1.0, 2.5 or 4.0

Description:

The SM-10 series of flowmeters operates according to the proven variable area principle. The flowing medium moves the float in a conical measuring tube in the opposite direction of gravitational force. The height of the float is a measure for the flow and it can be read from a non-abrasive and burnt-in scale. Optionally, inductive contacts fixed on the sight glass can be used for obtaining limit values. As a standard, all devices are equipped with a needle valve for precise regulation of flow.

Application:

The SM-10 series of variable area flowmeters is primarily intended for controlling and monitoring low-viscosity fluid or gaseous media. For standard conditions, scales for water or air are predefined and enable a quick and simple dimensioning of the devices. For other media or different process conditions specially customized scales are available.

Operating principle:

The flowmeter operates on the float measuring principle. The float adjusts itself so that the buoyancy force A, acting on it, the form drag W and its weight G are in balance:

$$G = A + W.$$

The height of the float is read on the scale of the measuring glass and indicates the flow rate. The top edge of the float marks the reading line for flow values.

Valve spindle	max. Flowrate		Valve characteristic value
	Water (20°C)	Air (20°C, 1.013 bar)	Cv

1.0	5	100	0.018
2.5	50	1000	0.150
4.5	160	4300	0.480

SM-12N

Conical Glass Flowmeter as per the Variable Area Principle

Features

- / For fluids and gases
- / Wide range of measuring
- / Easy to read scale
- / Low pressure drop
- / Turnable splinter shield
- / Optional limit switch

Description:

A float made of plastic or metal gets lifted by a fluid flowing vertically through a conical glass tube and set into rotation. Its upward movement stops at a point where the gravitational and dynamic forces become equal against each other. The body's position in the cone, therefore, depends of the flow with the result that the volume of flow can be read from the scale engraved on the sight glass.

Application:

Six different sight glass geometries and four different float materials allow a wide range of measuring with the SM-12N for all types of fluids and gases which are compatible with material being used. This data sheet provides an overview of possibilities for water and air at atmospheric state. Please ask us for different media, pressures or temperatures. The SM-12N series of variable area flowmeters is deployed wherever a volume of flow needs to be displayed without electrical means. Specially manufactured floats produce a negligible pressure drop. Often the advantage is that the characteristics of the material being measured can be assessed visually through the glass tube.

Technical Specifications:

Materials /

Process conn.:	AISI 316L - st. steel 1.4404
Housing:	AISI 304 - st. steel 1.4301
Nut:	AISI 316 - st. steel 1.4401 (or galvanized steel)
Stoppers:	PFA (tube L6, L7) PVDF, AISI 316L (tube P0-P4)
Measuring cone:	Borosilicate glass
Float: (see table 1+2)	Titan, PVDF (tube L6, L7) PTFE, PVDF (FDA conform), AISI 316Ti (1.4571) (tube P0-P4)
Sealing:	NBR (standard) FKM, EPDM (on request)

Pressure /

Measuring tube:	L6; L7	P0; P1	P2	P4
P_{max} [bar]:	16	10	8	6

Temperature / -25...+100°C

Mounting length / 375 mm (thread, clamp),
425 mm (flange)

Weight / 1.7...7.1 kg (see Table 4)

Mounting position / vertical, flow from bottom

Operating ranges / 0,002 l/h to 10 m³/h water (20°C)
0,1 l/h to 160 m³/h air (20°C, 1 bar abs.)

Range / 10:1 for P measuring tubes
20:1 for L measuring tubes

Accuracy / Class 2.5 for tube L613-L623
(as per VDI 3513) Class 1.6 for tube L624-L747
Class 1.6 for tube P051-P471

Versions:

Operating range code: To determine the operating range code, the desired operating range is ascertained in the relevant tables (Table 1 for water and fluids; Table 2 for air and gases) and the code is determined according to the measuring tube, the float and the other listed criteria. For example, the code [P]-[0]-[51]-[SS]-[0]-[3]-[N] indicates the operating range of 10 to 100 l/h water, a float in stainless steel 1.4571 without preparation for a limit contact, this means, without magnets in the float.

Process connection: G female thread, NPT female thread, EN and ASME flanges in stainless steel are available as variants for the connection. The table 3 (Model specification) provides information as to which measuring tube can be fitted with which connection.

Valve: A number of device variants can be equipped with a regulating valve. Optionally, the valve can be made of brass or stainless steel. Depending on the version, the valve can be mounted at the inlet or outlet. The table 3 (Model specification) provides information as to which measuring tube can be combined with which valve. The valves are connected to the flowmeter on site.

Limit contact: All type P measuring tubes can be equipped with REED contacts which require a magnetic float (the operating range code takes this into regard). Optionally, MIN contacts (normally closed) or MAX contacts (normally open) are available.

Electrical Specifications:

Limit contact / REED, bistable (potential-free)

Voltage / 230 V max.

Switching current / 2 A max.

Switching load / 40 VA or 40 W

Temperature / -10...+70°C

Protection class / IP65

Self-capacity / 0 nF

Self-inductivity / 0 mH

Connecting cable / LIYY 2 x 0,34 mm², 1 m long

Housing / Polystyrene

Weight / 35 g

SM-15

Plastic Flowmeters as per the Variable Area Principle

Features

- / For every industrial application
- / For fluid and gaseous media
- / Simple and robust design with high operational safety
- / PVC, PA, PSU and PVDF versions
- / Low pressure drop
- / Easy to assemble
- / High resolution scale
- / Optional alarm contacts and analogue output

Description:

The SM-15 series of flowmeters operates according to the proven variable area principle. The float gets lifted by the flowing medium and indicates the flow with its upper edge on the scale attached to the device. If floats with integrated magnets are used, optionally, alarm contacts or a measuring transmitter can be attached to the device. All devices possess a male thread on the measuring tube and are additionally equipped with standard PVC adhesive sleeves. As an option, also female threaded fittings made of PVC, PP, brass or stainless steel can be supplied.

Application:

Due to a wide variety of materials and easily interchangeable measurement scales, the SM-15 series plastic flowmeters can be deployed for most of media including hostile media. The main areas of application are water treatment, effluent technology, chemical and food-processing industries and many others.

Technical Specifications:

Meas. transmitter (optional):

Materials /

Measuring tube:	PVC-U; transparent Polyamide; transparent, with heavily reduced humidity absorption Polysulfon; transparent PVDF; opaque (yellowish-white)
Float:	PVDF, optional PVDF with integrated magnet (>1% lead of the REACH candidate list)
Seals:	EPDM, optional FPM
Tube connections:	PVC, optional PP, brass, st. steel

max. Pressure /

PVC:	10 bar at +20°C, 1 bar at +60°C
Polyamide:	10 bar at +30°C, 1 bar at +75°C
Polysulphone:	10 bar at +40°C, 1 bar at +100°C
PVDF:	10 bar at +40°C, 1 bar at +110°C

max. Temperature without joints at 1 bar /

PVC:	+60°C
Polyamide:	+75°C
Polysulphone:	+100°C
PVDF:	+110°C

max. Temperature with joints made of /

PVC:	+60°C
PP:	as per temperature parameters for the relevant measuring tube, but max. +80°C
Brass, st. steel:	as per temperature parameters for the relevant measuring tube

Mounting position /

vertical, flow from bottom to top

Assembly /

with moderation line 5-7 x DN before and after the device

Accuracy /

Cl. 4 as per VDI/VDE 3513, Bl. 2

Accessories /

Limit value switch: bistable contacts, NO-contact or NC-contact function

Analogue output: Measuring device with integrated measuring transmitter, 4...20 mA

Attention: Limit contacts or measuring transmitters operate only in combination with a float with integrated magnet.

Version /

reed chain

Housing material /

ABS

Assembly /

adjustable to dove-tail rail of the measuring tube

Supply voltage /

18...30 VDC

Analogue output signal /

4...20 mA, 2-wire (output can be calibrated/ set)

Electrical connection /

plug connection M12, 4-pole, with counter-plug angular 90°

Measuring length /

114 mm

Resolution /

3.5 mm

max. Operating temp. /

0...+70°C

max. Ambient temp. /

-20...+70°C

max. Ambient pressure /

atmospheric 0.8...1.1 bar

max. rel. Humidity /

20...85%

CE marking /

DIN EN 61326-1, DIN EN 55022/B

Protection class /

IP 65 (with plug)

The optionally available measuring transmitter for the flowmeter SM-15 is clipped to the dove-tail rail mounted on the measuring tube. The unit comprises a reed chain, the respective evaluation and implementation. Thanks to the 2-wire technology voltage supply and output signal do not run separated from each other. The exact magnet field sensors of the receiver capture the height of the magnetic float and convert its position continually into a 4...20 mA output signal. This signal can be directly further processed.

- 4. n.c.

Wiring diagram

Indicator Dimensions:

For the media water (in l/h) and air (in Nm³/h) at relative operating pressures of 0, 1, 2 and 3 bar, standard scales are available.

For other media such as air at higher operating pressure, HCL (30%), NaOH (30%) and, for the units m³/h, l/sec., l/min, USGPM or IGPM, special type scales can be supplied on request.

These supplementary special type scales can be attached later easily and reliably on the flowmeter. There is no need of any modifications to the measuring device.

For other media and/or operational conditions, special type scale can be offered on request.

For this, the following data is required:

- Medium
- Operating pressure
- Operating temperature
- Operating density
- Operating viscosity

Limit contacts (optional):

Version /	bistable reed contacts.
Contact function /	NO-contact or NC-contact for rising flow
Assembly /	adjustable to dove-tail rail of the measuring tube
Switching load /	max. 230 VAC, max. 0.5 A, max. 10 VA
Operating temp. /	0...+55°C
Hysteresis /	10 mm
Connection layout /	2-wire, irrespective of polarity

Operating Ranges (Table 1):

SM-20

Variable Area Flowmeter for Small Flow Volumes in Compact Design

Features

- / For fluids and gases
- / Operating pressures up to 400 bar
- / Operating temperatures up to 250°C
- / Scales for all operational conditions individually designed
- / Local display, MIN. MAX. contacts or analogue output
- / Measuring tube fully st. steel 1.4571
- / Optionally available with valve

Description:

The SM-20 series of flowmeters operates according to the proven variable area principle. The conical float is introduced into a cylindrical measuring tube. The flowing medium moves the float in the direction of flow. The movement of the float is magnetically transferred to a display unit situated outside the measuring tube. The display unit is provided with a scale that is designed to match the operational conditions. Additionally, it can also be equipped with contacts or an analogue output.

Application:

The SM-20 series of variable area flowmeters is intended for measuring and monitoring low-viscosity fluid or gaseous media, for example, in cooling systems for welding machines, laser and pipe installations, pump monitoring, compressors and so on. Due to the fact that for all wetted parts high quality stainless steel 1.4571 has been used, the device is excellently suited for even hostile media.

Technical Specifications:

Materials /	wetted parts made of stainless steel 1.4571 housing made of 1.4301
max. Pressure /	PN 100 (standard), PN 10, 40, as per ordering codes (higher pressures up to 400 bar on request)
max. Temperature /	
local display:	-25...+250°C (+150°C with valve)
with contacts:	-25...+135°C
with analogue output:	-25...+65°C (lower temperatures on request)
Protection class /	IP 66/67
Accuracy /	± 4% of operating range value
Options /	Ex-approval, pulse output
Contact /	
Type:	inductive (as per DIN EN 60947-5-6) SC2-NO
Nominal voltage:	8 VDC
Output signal:	≤ 1 mA or ≥ 3 mA
Hysteresis:	< 0.5mm
Analogue output /	
Supply:	14...30 VDC
Output:	4...20 mA
Load resistance:	(U-14V) / 20 mA, 500Ω max.
El. connection:	quick connect QUICKON
Pulse output:	available on request
Ex-Version:	available on request

Ranges:

No. of operating range	Water 20°C - l/h	Air 20°C. 1.013 bar abs. NI/h	Pressure drop mbar

SM-25

Variable Area Flowmeter with Flange Connection, Irrespective of Viscosity

Features

- / For fluids and gases
- / Operating pressures PN16, PN40, PN63, PN100 as standard, higher pressures up to 700 bar on request
- / Operating temperatures up to +370°C
- / Scales for all operational conditions, individually designed
- / Local display, MIN. MAX. contacts or analogue output
- / Measuring tube fully st. steel 1.4404
- / Optionally with PTFE lining

Description:

The SM-25 series of flowmeters operates according to the proven variable area principle. The float is introduced into a conical measuring tube where the medium's viscosity has nearly no effect on the float's movement. The flowing medium moves the float in the direction of flow. The movement of the float is magnetically transferred to a display unit situated outside the measuring tube. The display unit is provided with a scale that is designed to match the operational conditions. Additionally, it can also be equipped with contacts or an analogue output.

Application:

The SM-25 series of variable area flowmeters is intended for measuring and monitoring fluid or gaseous media of any type. Due to the fact that for all wetted parts high quality stainless steel 1.4404 has been used, the device is excellently suited for hostile media as well as for use in the food-processing industry (by using Tri-Clamp or milk tube joints).

How to order:

1. Choose a version
2. Select the desired process connections from the Table „Process connections“
3. Select the operating range as per the Tables „Operating ranges“
4. Select the display component and the desired output signals
5. Determine the required options

1. Versions

Depending on the medium the SM-25 series of flowmeters is available in fully stainless steel 1.4404 (SM-25.1) or with PTFE lining versions for all wetted parts (SM-25.2).

Other materials such as Monel, Hastelloy, tantalum are available on request (SM-25.9).

Technical specifications:

Measurable media /	fluids, steam and gases
Operating ranges /	see tables 3a and 3b
Ratio of op. range /	10 : 1
Accuracy /	
SM-25.1:	Class 1.6 (DN15 - DN100)
SM-25.1:	Class 2.5 (DN125 - DN150)
SM-25.2:	Class 2.5 (DN15 - DN100)
Process connection /	siehe Tabelle „Prozessanschlüsse“
max. Pressure /	see Table „Process connections“ (op. pressures up to 700 bar on request)
Operating temperature /	
SM-25.1:	-180. . .370°C
SM-25.2:	-80. . .130°C
	(Note max. operating temperatures of display unit and possible options)
Materials /	
SM-25.1:	all wetted parts are st. steel 1.4404, (AISI 316 L)
SM-25.2:	all wetted parts are st. steel 1.4404, (AISI 316 L) with PTFE coating
Mounting position /	vertical
Direction of flow /	from bottom
Mounting length /	see Table „Process connections“
Straight inlet /	
DN 15-65:	none
DN 80-100:	min. 5D
Protection class /	IP 66 with stainless steel housing IP 66 with aluminium housing IP 66/67 NEMA 4, 4x, 6 (not available for Ex d housings)

SM-25 – with limit switches
– with electronic transmitter

SM-25 – with limit switches
– with electronic transmitter

Technical Spec. (Display):

Indicator mechanical /

Media temp.: -25...+110°C (for higher or lower operating temperatures from -80...+370°C order option „Insulation distance“)

Contacts /

Type: inductive proximity switch SC3.5-NO as per DIN EN 60947-5-6 (NAMUR)

Media temp.: -25...+120°C at T_{amb} = +60°C (outside this temperature range order option 'Insulation distance')

Nominal voltage: 8 VDC

Output signal: ≤ 1 mA or ≥ 3mA

Explosion prot.: Ex ia IIC T6

Recomm. acc.: isolated switch amplifier Type SE01 (see under "Options")

Electrical measuring transmitter /

Output signal: 0...20 mA, 4...20 mA

Display: LCD, 8-digit (programmable for display of units of flow or as non-reversible total volume counter)

Auxiliary power: see Table 4d

max. Load: 4-wire: ≤ 500 Ohm
2/3-wire: ≤ (U-14,0 V) / 20 mA, max. 500 Ω

Op. temperature: -25...+70°C (outside this temperature range order option 'Insulation distance')

El. connection: M16 x 1,5 or 1/2" NPT

Intrinsically safe Electrical measuring transmitter /

Technical specifications like standard version, except:

Output signal: 4...20 mA

Op. temperature: -25...+70°C (outside this temperature range order option 'Insulation distance')

Ex-protection: Ex ia IIC T6 Gb acc. to Ex certificate

Recomm. acc.: feeding device Type SE11 (see under "Options")

Pulse output: on request

The temperature graphs are reference values for size DN100. They may be influenced negative by trapped heat, external heat sources or radiated heat and influenced positive for smaller sizes. Insulation means rock wool between tube and indicator. Units with electronic transmitter can show the temperature of the internal transmitter on the display. Units with PTFE lining are usable up to 130°C. For units with explosion proof certification the temperature limits according the certificate of conformity must be regarded. The minimum ambient temperature for indicators is -25°C (lower temperatures on request).

5. Options:

5a. Insulation distance (SM-25.A):

For media temperatures outside the values specified under Technical specifications, an insulation distance of 95 mm is created between the measuring tube and display unit. With this the temperature resistance can be increased up to values as specified for the measuring tube.

5b. Attenuation (SM-25.D):

It is recommended to provide attenuation of the float for gas applications under the following conditions:

Float type	Operating pressure \geq	
SM-25.D.1:	L	1 bar
SM-25.D.2:	M	5 bar
SM-25.D.3:	S	10 bar

(for SM-25.1 only (stainless steel))

5c. Heating:

Heating elements (steam cover) are meant for maintaining a certain media temperature in the measuring tube. Heating elements with 3 different process connections are available:

SM-25.H.1:	DIN-flange DN15 PN40
SM-25.H.2:	DIN-flange DN25 PN40
SM-25.H.3:	NPT 1/4" female thread

(see also Table 1, „Process connections“)

5d. Oil and grease-free (SM-25.F):

For applications with oxygen the devices free of oil and grease can be supplied.

5e. Tests and certifications

on request

5f. Measuring point labels,

customer-specific scale labeling:

Please specify exact text for labels.

5g. Isolated switching amplifier (Type SE-01):

Version:

as per DIN EN 50227 (NAMUR)

Supply voltage output:

SE-21.1: 230VAC/DC, 1 channel, 1 change-over contact

SE-21.2: 230 VAC/DC, 2 chan., 2 change-over contact

SE-21.3: 24 VDC, 1 channel, 1 change-over contact

SE-21.4: 24 VDC, 2 channel, 2 change-over contact

Switching load:

max. 250 VAC, max. 2A

Control power circuit

intrinsically safe [EEx ia] IIC

5h. Transm. power supply for intrinsically safe operation

(Type SE-11):

Output:

0/4...20 mA, with galvanic

separation of inlet and outlet

Supply voltage:

SE-11.1: 230 VAC

SE-11.2: 24 VAC/DC

max. load:

750 Ohm

Control power circuit:

Dimensions in mm:

SM-25 – Housing Type 0 (st. steel)

SM-25 – Housing Type 2 (aluminium)

SM-30

Variable Area Flowmeters for very low flow rates

Features

/ Indication without power supply

/ For fluids and gases

/ Stainless steel

**/ High resistance to pressure
and temperature**

**/ Compact design, no inlet and
outlet sections**

/ Optional: limit switch

Description:

The SM-30 flow meter works according to the proven float principle. The flowing medium moves from bottom to top to lift the float against gravity in a conical metal tube. The height of the float is a measure of the flow and can be read off directly.

Application:

Variable area flowmeters of the SM-30 series are mainly used to measure liquid and gaseous media. Due to their robust design, they are particularly suitable for difficult operating or environmental conditions.

The devices are particularly suitable for measuring small amounts of:

- Process or carrier gases
- Nitrogen, CO₂ or other industrial gases
- Flushing media for measuring systems
- Air or water
- Chemicals and additives
- Lubricants, coolants and anti-corrosion agents

Technical Specification:

Measuring principle /	variable area measuring principle

DT-03

Calorimetric Flow Sensor in Compact Design with Optional Analogue Output

Description:

The sensor system of the DT-03 series flow sensor is based on the calorimetric principle. A heated measuring resistance is mounted into a stainless steel sleeve in such a manner that the fluid carries the heat proportional to the inflow velocity. The heat output that must be fed to the sensor in order to maintain the resistance temperature constant is, therefore, a measure for the volume of flow. A second PT100 measuring resistance is located inside the sleeve within the flow to measure the temperature of the media. This will rule out temperature changes in the streaming fluid being interpreted erroneously as change of flow. The electronic components in the DT-03 receive information from the sensor about the flow and the temperature and convert them into a PNP or NPN switching output, a 0..10 V DC or 4..20 mA analogue output or an impulse output. At the 4-pole output plug of the DT-03 an analogue output and a switching output (on request as impulse output) are tapped that can be freely assigned ex factory to the parameters of volume and temperature.

Application:

The flow sensors of the DT-03 series are the logical consequence of Profimess' proven DT-01 and DT-02. Due to the new method of outputting flow and temperature also as analogue or impulse output and combining both the parameters, the application spectrum of the calorimetric technology has experienced a vast expansion in the technology of fluid measurement. The DT-03 sensors are used wherever flow and temperature of fluid media need to be tapped in narrow spaces and wherever it would be advantageous, due to the type of fluid, to use entirely stainless steel switches for the wetted parts without any moving components. In order to ensure maximum error sensitivity of the sensor, the DT-03 should be mounted for direction of flow from bottom to top as this will facilitate optimum ventilation even in extremely low flow speeds.

Features

- / No moving parts
- / Optionally with temperature output
- / Switch or transmitter
- / Mounting in T pieces of 3/8" to 2"
- / Wetted stainless steel

Technical Specifications:

Operating range velocity /	water 2...150 cm/s or 3...300 cm/s, oil on request
Accuracy /	± 10% set point value (tested on water with 10xD in inflow and outflow in rising tube)
Reproducibility /	± 1%
Switching hysteresis /	flow 4% set point, temp. approx. 2°C
Temperature gradient /	max. 4°C/s or rather 4 Kelvin/s
Op. range temp. /	0...70°C, 0...120°C with gooseneck
Storage temperature /	-20...+80°C
Materials /	wetted st. steel 1.4571, others 1.4305
Operating pressure /	max. 100 bar, 200 bar on request (if necessary, consider pressure level of T-piece)
Operating temp. /	0...70°C (electronics)
Weight /	approx. 200 g (standard version)
Assembly /	staved cross points to inflow
Programming the setpoints /	by means of magnet supplied along, the magnet is brought between 0.5 and 2 seconds to the marking on the label. The excrescent measuring value is stored as limit value, the LED changes to O.K. status. Longer or shorter magnetizing times than 0.5 or 2 seconds are ineffective (protection against external magnetic fields)

Electrical Specifications:

Power supply /	24 VDC ± 10%
Power consumption /	max. 100 mA
Connection /	round pin connector M12 x 1, 4-pole
Switching output /	Transistor output Push Pull, line short circuit and reverse polarity protected
Switching current /	max. 100 mA
As frequency output /	max. 2000 Hz
Analogue output /	4...20 mA max. load 500 Ohm or 0...10 VDC
Display /	yellow LED (ON = o.k., OFF = Alarm)
Setting /	through magnet
Protection class /	IP67

Dimensions in mm:

DT-06

Calorimetric Air Flow Switch

Features

- / Titanium sensor surface
- / No moving parts
- / Simple assembly
- / DC- and AC version available
- / Protection class IP 65
- / Relay output
- / LED function display
- / Cost-effective

Description:

Electronic flow switches operate on the basis of the calorimetric principle. They use the physical effect that a flowing medium absorbs heat and conducts it away. The sensor tip contains two temperature-dependent resistors as well as a heat source. The heat source generates a local temperature rise in the medium which is detected by one of the PTCs. When the medium flows, energy is conducted away from the heat source, i.e. it is cooled. The resulting temperature change is an indication of flow. To avoid a falsification of the result of the measurement by change of the medium temperature, a second PTC is used for temperature compensation. The difference in resistance of both PTCs is used for a temperature compensated statement by the electronic evaluation system „Medium flows“ or „medium does not flow“ as compared with a predefined set-point or limiting value.

Application:

The DT-06 series is intended for cost-effectively detecting and signalling of changing air flow within specified limits, it can be mainly used for monitoring air conditioners as well as ventilation systems. Typical applications are Function control of blowers and fans, Filter condition monitoring, Flap position monitoring for air distribution

Technical Specifications:

Operating range /	100...1000 cm/s
Greatest sensitivity /	100...400 cm/s
Switch point adjustment /	potentiometer
Power-on delay time /	60 s

SM-00

Impeller Flowmeter for Small Volumes of Fluid

Description:

The SM-00 is a universally applicable flowmeter for small to medium volumes of thin fluid. A rotor mounted on one side on a bearing pin is made to rotate by a flow obliquely directed through a nozzle where the rotor's blades are equipped with magnets. A Hall effect sensor mounted externally on the flow housing emits a small voltage impulse every time when one of the magnets passes by its front side. The electronics of the SM-00 are capable of receiving these impulses and translating them into an NPN Open-Collector rectangular signal that will be made available to the plug output.

Features

/ Arnite, Larton® G/40 or PVDF

/ Up to 100°C

/ Up to 20 bar

/ Wide choice of operating range

/ Excellent media resistance

Application:

The SM-00 is the ideal device especially for tapping small volumes of flow of chemically hostile fluids. The available material combinations are Arnite, Larton® G/40 and PVDF which can be deployed in many areas of the chemical industry. With its range of up to 100°C and 20 bar, for a plastic device the limits in regard to pressure and temperature are very outstretched and the Open-Collector signal in NPN form can be evaluated by any common control device. The available connection threads are G1/4" female thread as well as G1/2" male thread where the user has the option to place both the inlet and the outlet of flow on a single side of the SM-00 or, to have, preferably, one connection on the right side and another on the left side of the flowmeter.

The unique impeller bearing of the SM-00 ensures a long life for the SM-00. As against many other devices available in the market, the rotor is not mounted on both sides but it practically „floats“ during operation over a one-sided bearing pin. Thus, the design of the device ensures durability and, consequently, maximum possible rotational speed of the impeller.

Technical Specifications:

Material /	
SM-00.1:	Housing made of PBT 35%GF (Arnite) bearing pin made of stainless steel 1.4305 (1.4571 optional) O-Ring made of silicon (Viton or EPDM optional) rotor made of PVDF magnets made of ceramic Sr Fe O
SM-00.2:	Housing made of PPS 40%GF (Larton® G/40) bearing pin made of stainless steel 1.4305 (1.4571 optional) O-Ring made of silicon (Viton or EPDM optional) rotor made of PVDF magnets made of ceramic Sr Fe O
SM-00.3.1:	Housing made of PVDF Bearing pin made of st. steel 1.4305 (1.4571 or PCTFE (nozzle PTFE) optional) O-Ring made of Viton (EPDM optional) Rotor made of PVDF Magnets made of ceramic Sr Fe O
SM-00.3.(2. . .3):	Housing made of PVDF Bearing pin made of PCTFE O-Ring made of Viton (EPDM optional) Rotor made of PVDF magnets made of ceramic Sr Fe O (not wetted)
Flow volume /	depends on the version and nozzle, see Tables 1 and 2
Accuracy /	± 2% of MV
Reproducibility /	< ± 0.25%
Temperature range /	
SM-00.1:	-10. . .+65°C
SM-00.2:	-10. . .+100°C
SM-00.3:	-10. . .+100°C
Pressure /	max. 20 bar at 20°C
Mounting position /	horizontal pos. recommended
Nozzle sizes /	see Tables 1 and 2
Process connection /	G1/4" female on one side or G1/4"male on both sides (left/right), or G1/2"male on both sides (for large operating ranges only)

Electrical Specifications:

Supply voltage /	4,5. . .24 VDC
Power consumption /	5. . .13 mA
Output /	rectangular impulse NPN open collector
Signal load /	20 mA max.
Current leakage /	10 µA max.
El. connection /	3Pin -AMP 2.8 x 0.8 mm (counter-plug available as accessory)

6 = Bearing pin in PCTFE instead of st. steel 1.4305 for versions in PVDF with one-sided thread					

Versions:

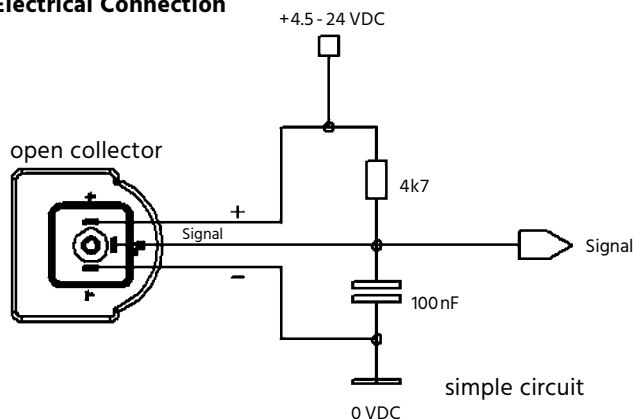

Material version: The basic body of the SM-00 can be made of materials such as Arnite, Larton® G/40 or PVDF where the Arnite and Larton versions are intended for standard applications while the PVDF version has been developed for applications in the chemical industry.

Connections: The available thread connections are G1/4" female thread and G1/2" male thread which allow the user to decide placing both the flow inlet and outlet on the same side of the SM-00 or, preferably, one connection on the right side and another on the left side of the flowmeter. The possible operating ranges vary with different versions as detailed in the Tables 1 and 2.

Nozzle size: The nozzle at the inlet of the SM-00 enables an oblique direction flow within the body of the SM-00 and is largely responsible for the dynamic functioning of the flowmeter and, therefore, for the length and position of the linear operating range. The relationship between the nozzle size and operating range is detailed in the Tables 1 and 2. The operating ranges given in these tables indicate the linear range of the relevant version. The specified pressure drop occurs when the full scale value of the measuring range is reached.

Options: The bearing pin in the Arnite and Larton® G/40 versions of the SM-00 is made of stainless steel 1.4305 as a standard and the sealing ring is made of silicon. If the medium in question has special requirements in regard to the material, the bearing pin can be also supplied in stainless steel 1.4571 and the O-Ring in Viton or EPDM. The PDVF version of the SM-00 is used, especially when the requirements of strength on the flowmeter are very high. In the case of the variant with thread connection, the bearing pin is made of stainless steel 1.4305 on the one side and, in those with thread connections on both sides it is made of PCTFE. Optionally, the stainless steel pin in the one-sided version can also be replaced by a PCTFE pin. In this „chemical“ version, the impeller magnets are fully infused and hence not wetted.

Electrical Connection

All given values are average and have been measured for water at room-temperature and horizontal position.
The actual values differ, depending on the application, by an accuracy of $\pm 2\%$ of MV.

SM-04

Impeller Flowmeter, Switch and Indicator in Modular Design

Features

- / Robust and compact flow sensor
- / Variety of materials
- / Location-independent
- / Operating range ratios up to 40:1
- / No inflow outflow lines required
- / Different measuring transmitters
can be mounted directly or are
available for DIN rail mounting

Description:

The SM-04 series of impeller flowmeters consists of a sensor and an optionally available measuring transmitter. The sensor has an impeller that is fitted in a housing made of PPS, brass or stainless steel. The impeller is set into rotation by the streaming medium. Depending on the material version, this rotational movement is tapped by an inductive, optical or Hall sensor-system and output as a frequency signal which is proportional to the flow. For the evaluation of the signal, different types of measuring transmitters are available which can amplify, convert or display the impulse signal from the sensor.

Application:

Due to their modular design, the SM-04 series of impeller flowmeters represents a versatile measuring and monitoring system for all low-viscosity fluids that do not corrode the materials being used.

Technical Specs - Sensor:

max. Pressure /

SM-04.1:	16 bar
SM-04.3/4:	100 bar

max. Temperature /

SM-04.1:	0...+60°C
SM-04.3/4:	0...+100°C

Accuracy / ± 3 % of MV

Reproducibility / ± 1 % of FSV

Electrical Specs - Sensor:

Supply voltage /

PNP/NPN:	10...30 V DC
NAMUR:	7...12 V DC

Power consumption /

Inductive:	10 mA
NAMUR:	7 mA
Hall Sensor:	30 mA

Output current max. /

Inductive:	200 mA
NAMUR:	7 mA
Hall Sensor:	100 mA

Output circuit / PNP, NPN or NAMUR

Short-circuit proof / yes

Polarity-reversal proof / yes

El. connection / 2 m cable or plug connection

Protection class / IP 67

Electrical Specs - Display:

Supply voltage / 18...30 VDC

Power consumption / < 1 W

Output signal / 0/4...20 mA max. load 500 Ω
(or 0/2...10 VDC, min. 1 Ω on request)

Switching outputs / 2 x transistor outputs „Push-Pull“safe against short-circuit and pole-reversal) max. I_{out} = 100 mA

Hysteresis / adjustable, direction of hysteresis depends on MIN and MAX

Technical Specs - Display:

Display / graphical LCD-display 32x16 pixels, backlight, indicates measuring value and unit

LED-indicator / flashes simultaneously with displayed message

Media temp. /

SM-04.1:	0...+60°C
SM-04.3/4:	0...+70°C (0...+100°C with optional gooseneck)

El. connection / for round plug connector M12x1, 5-pole

Protection class / IP 67 (IP 68 when oil-filled)

Materials /

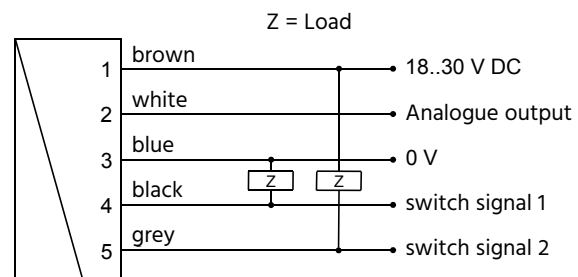

Clamps:	stainless steel (1.4301)
Housing:	stainless steel (1.4305)
Adapter:	CW614N nickel-plated
Glas:	mineralglas hardened
Magnet:	samarium-cobalt
Ring:	POM

El. Specs - Analogue Output:

Output current / 4...20 mA at 10...30 VDC

Output voltage / 0...10 V at 15...30 VDC max. 20 mA

El. Connection Sensor:

SD-04

Impeller Flowmeter with Dosing or Switching Electronics

Features

- / Nominal diameters DN06 to DN50
- / Pressure-proof up to 16 bar
- / DC- or AC power supply
- / Variety of materials
- / Flanges and connections for food-processing applications
- / Available as NAMUR transmitter for ATEX zone 0 or 20 on request

Description:

An impeller made of PVDF is set into motion by a flowing medium. It generates through completely compound-filled magnets an impulse signal in the transmitter electronics proportional to the flow. Depending on the version the measuring transmitter, this signal is converted into different functions. In the simplest version, the complete unit is battery powered and displays the current flow rate and additionally two resettable counters. The next level has a 4...20 mA signal and a pulse output, which is designed as a transistor output, and, in addition, two resettable totalizers that can be used as the main and day counters. Naturally, also the current flow rate can be displayed and furthermore two additional relay outputs are available, if switchpoints are necessary. The full version of SD-04 includes a dosing device with 2 totalizers, 2 relays and 3 dosing modes. The dosing volume can be set through a keypad, binary inputs or pulse-modulated through a PLC. The dosing device is capable of determining the K factor of other flow sensors by means of „Teach-in“ or, in the same way, to enhance (litre-wise) the accuracy of the inbuilt own sensor. Moreover, for testing the system a flow can be simulated in a „dry“ run, thereby meeting the highest requirements of modern dosing technology. The sensor and electronics are connected to each other through a simple bayonet lock; therefore, the electronics are easily interchangeable. Pick-up sensors and transmitter variants can be interchanged in any manner.

Application:

Thanks to the variety of materials and connectivity in the flow pick-up sensor in the SD-04, the user has immense possibilities of application. Polypropylenes, PVDF and PVC offer a choice of synthetic materials that are resistant to nearly all hostile media and, materials such as brass and stainless steel logically supplement the choice favoring metals. All commonly used thread variants, DIN and ANSI flanges in stainless steel and Tri-Clamp supports and welded ends are available as connectors and thus enable coupling the SD-04 to nearly any process. The nominal diameter ranges from DN06 to DN50 and covers, therefore, a wide range of flows.

Technical Specifications:

Nominal diameter /	DN06 to DN50
Operating range /	0.5 ..1200 l/min
Flow velocity /	0,3 ..10 m/s (hall transducer version) 0,5 ..10 m/s (batterie version - coil transducer)

Accuracy /

Teach-In:	± 1% of measured value
Standard K-Factor:	+ 2.5% of measured value (at 10 m/s)

Linearity / ± 0.5% of F.S. (at 10 m/s)

Repeatability / ± 0.4% MW

Viscosity & Pollution / clean, neutral or aggressive fluids
max. 300 cSt / 1% max.
(particle size: 0.5 mm max.)

Media temperature /

PVC:	0 ..+50°C
PP:	0 ..+80°C
PVDF, brass, st. steel:	-15 ..+100°C (high temperature on request)

Operating and storage temperature of sensor housing /

PVC:	-15 ..+60°C
PP:	-15 ..+80°C
VA, Ms, PVDF:	-15 ..+100°C

Rel. humidity / ≤ 80%, non-condensed

max. Pressure Fitting /

Plastic:	10 bar up to 20°C (see P-T diagram)
Metal:	16 bar (40 bar on request)

Materials Fitting /

Seal:	FKM (EPDM)
Housing:	PVC, PP, PVDF, brass (CuZn ₃₉ Pb ₂) stainless steel (316L - 1.4404)
Screws:	stainless steel (316L - 1.4404)
Impeller:	PVDF (PP or stainless steel on request)
Axis and bearing:	ceramics (Al ₂ O ₃)

Materials Electronics /

Housing, cover, lid, nut:	PC
Front film:	polyester
Screws:	stainless steel
Cable, plug or glands:	PA

Wetted parts /	fitting, impeller, axis, bearing and seal
Display /	15 x 60 mm, 8-digit LCD, alpha-numeric, 15 segments, 9 mm high
Norm /	2014/68/EU
Certificate /	EN-ISO 10204 DIN 4762 DIN 4768 ISO/4287/1

Impeller sensors ensure reliable operation in the range of 0.3 to 10 m/s flow velocity which means that their accuracy of 0.5% from one end of the range plus 2.5% of the measured volume is available for a range of 1:33. In dosing technology, especially the SD-04 has hardly any match, considering its variety in respect to volume specifications, resistance to different media and, not the least, its excellent price to performance ratio.

Nominal Diameter Options:

--- not recommended

SD-05

Plastic Impeller Flowmeter

Features

- / DN25 to DN50
- / 5 to 1000 l/min in four operating ranges
- / Wetted parts out of PP, ECTFE, ceramic and Viton
- / 4 to 20 mA or pulse output
- / Optionally with switching contacts
- / Intended for operating pressures up to 10 bar

Description:

The SD-05 impeller flowmeter measures thin fluids according to the impeller wheel principle. An impeller wheel made of ECTFE that holds moulded magnetic pins on its five vanes projects into a polypropylene fitting. Since less flow velocity is present at the edge of the pipe than in the centre a torque causes the rotor to rotate proportionally to the flow on the axis made of ceramic. An externally mounted electronic element records the rotating speed of the impeller by means of a Hall effect sensor that emits a voltage impulse whenever a magnet crosses it and, through an amplifier, produces an NPN impulse signal at the PINs of connector. In the version with 2-wire output the impulse signal is readily converted internally into a power signal. In contrast to this, in the case of the 3-wire version, as also in a variant with impulse output and two additional threshold value relays, an SD-05 equipped with a "normal" impulse output can be easily converted into a flowmeter with 3-wire power output or one with a Push-Pull impulse output and threshold value relay by replacing the mating plug.

Application:

The most significant characteristic of flowmeters in the SD-05 series is that the materials used are plastics and, therefore, even the most hostile fluids do not pose any problems. This device offers particularly a dependable solution for deploying it in fully desalinated water where metallic components are often ruled out. The measuring range of all the four available nominal diameters of SD-05 scales at 1:50 which means that minimum 5 and maximum 1000 litres per minute can be recorded. By virtue of its design the SD-05 causes only a negligible pressure drop within the piping system and is, therefore, a cost-effective alternative for measuring low-viscous fluids.

Electrical Specifications:

Pulse output (SD-05.xx.x.x.IM) /

Function:	NPN-open-collector
Supply voltage:	4.5 .. 24 VDC
Current:	max. 15 mA at 24 VDC
El. connection:	plug connector as per EN 175301-803A (cubical-shaped)
Protection class:	IP65

Analogue output 2-wire (SD-05.xx.x.x.A2) /

Supply voltage:	15 .. 24 VDC
Current:	4 .. 20 mA, 2-wire
Damping:	factory adjustable in steps of one second
El. connection:	plug connector as per EN 175301-803A (cubical-shaped)
Protection class:	IP65
Ambient temp. at the plug:	max. +55°C

Analogue output 3-wire (SD-05.xx.x.x.A3) /

Supply voltage:	15 .. 24 VDC
Current:	10 .. 40 mA
Damping:	factory adjustable in steps of one second
El. connection:	plug connector as per EN 175301-803A (cubical-shaped)
Protection class:	IP65
Ambient temp. at plug connector:	max. +55°C
Mounting:	The electronic modul is easily plugged between the plug connector and the mating plug of the SD-05 and transforms the pulse output into an analogue output. The correlation between analogue output and operating range is adjusted with a REED switch at the plug connector. This electronic modul can be field upgraded at any time.

Pulse output Push-Pull and two additional threshold value relays (SD-05.xx.x.x.FK) /

Supply voltage:	4.5 .. 24 VDC
Current:	10 .. 220 mA
Outputs:	1 x complementary final stage (11 mA, 24 VDC), 2 x semiconductor relays (0.1 A/24 VDC)
Damping:	factory adjustable in steps of one second

El. connection: plug connector as per EN 175301-803A (cubical-shaped) with one meter cable

Protection class: IP65

Ambient temp. at plug connector: max. +55°C

Mounting: The electronic module can be easily connected between the plug connector and the mating plug of the SD-05, transforming the pulse output into a push-pull pulse signal (suitable for PNP and NPN inputs). It also sets two limit switches on the semiconductor relay available. The measuring and limits are set via a REED switch on the connector. This model can be retrofitted on existing installations.

Technical Specifications:

Measuring principle /	rotating vane
Sensing system /	Hall effect, non-contacting
Operating ranges /	5 .. 250 l/min, DN25 10 .. 400 l/min, DN32 15 .. 600 l/min, DN40 20 .. 1000 l/min, DN50 at 0.15 .. 10 m/s and 42 Hz per m/s
Accuracy /	± 3% on calibrated range
Repeatability /	< 1% on calibrated range
Operating pressure /	10 bar max. (at +22°C)
Burst pressure /	>15 bar (at +22°C)
Operating temperature /	0 .. +80°C
Viscosity range /	0.5 .. 20 cSt
Housing material /	Polypropylene
Rotor /	5 blade rotor from ECTFE with encapsulated magnets
Axis/Bearing /	ceramic Al ₂ O ₃
O-Ring /	FKM (optionally EPDM)

DN50 / G2"	125	135	50	89	75

Impulse characteristic curve:

Calculation formula for the frequency determination of the flowmeter:

$$\text{Frequency [Hz]} = 42 \times \text{Flow [m/sec]}$$

Example for Frequency determination:

$$500\text{l/min at DN 50} \rightarrow \text{Frequency} = 42 \times 4.9 \text{ [m/sec]} = 205.8 \text{ Hz}$$

Installation Instructions:

Different types of piping and flow obstacles such as fittings, fittings, dirt traps, etc. cause different sized interference profiles whose smoothing is determined in line (pipe) lengths according to DIN 1952. In order to ensure optimum function, the installation should be made according to DIN 1952 as far as possible.

SM-08

Miniature Turbine Flowmeter for Fluid Media

Features

**/ High accuracy of measurement
and resolution**

/ Low deviation in mass-production

/ Plastic, brass or st. steel designs

/ Pressure-proof up to 300 bar

/ High temperature resistance

/ Convenient dim. for assembly

/ Affordable low-cost alternative

Description:

The SM-08 series of flowmeters operates according to the principle of a turbine wheel. In this the fluid flows into the turbine body and gets deflected by the guide blades at an angle of 90°. The resulting tangential flow sets a rotor into a rotation that is proportional to the flow. Depending on the device version, this rotational movement is converted into an output frequency by means of an inductive proximity sensor or a Hall sensor. A main feature of the turbine flowmeter SM-08 is that the deviation in mass-production is very low compared to other similar designs. Consequently, individual tuning for each turbine to match the particular downstream electronic unit becomes unnecessary; the SM-08 is thus ideally suited for use in series applications.

Application:

Due to their compact design, wide range of measurement and highly accurate measuring, the SM-08 series of turbine flowmeters is suitable for applications in the following areas:

- Cooling water measurement
- Medical engineering
- Plastics industry
- Solar installations
- Machine tools
- Photo laboratories
- Tapping and dosing installations
- Cooling and heating applications
- Heat volume logging
- and many more...

Measuring principle & Dimensions:

SM-08.15:
Op. range 2 . . 20 (2 . . 40) l/min
Axial turbine flowmeter
with guide blades

The fluid flowing into the flowmeter gets divided by the guide blades into four partial jets which strike the rotor from four directions and set it into rotation. Due to the uniform load on the bearing from four sides, the forces become largely neutralized and the wear is reduced to a minimum. In addition, extremely hard bearing material such as sapphire and carbide metal ensure extraordinary long life span.

SM-08.25:
Op. range 4 . . 80 (4 . . 160) l/min
Axial turbine flowmeter

The fluid streaming into the flowmeter sets the turbine wheel into rotation. Due to the high-quality sapphire bearing and low RPM, the turbine has an extraordinarily long life span. The rotor RPM is converted into an electrical pulse signal (frequency).

SM-08.40:
Op. range 0.4 . . 25 m³/h
Axial turbine flowmeter
with partial stream evaluation

In the center of the brass-made turbine body a plastic turbine system is situated. An annular gap is designed around the turbine system. Part of the fluid stream sets the turbine into rotation while the other part of the stream is allowed to pass through the annular gap without obstruction. The rotor RPM is then converted into an electrical pulse signal (frequency). Due to high-quality sapphire bearing and low RPM, the turbine has an extraordinarily long life span.

SM-08.Z.L10	as above, however L = 10 m
SM-08.Z.S	coupling box M12 x 1, 4-Pin, for self-customization

Limit Value Emitter (optional) SM-08. . .VE(P)

Description: The SM-08 can be transformed into a flowswitch with the help of an optional limit value emitter. The turbine delivers a flow-proportional frequency signal to a microprocessor. This monitors the set minimum flow and activates the alarm contact without potential, if the flow falls short. Even a likely blockage in the turbine is reliably identified and signaled. Besides the switching output (contact), optionally, an impulse signal is available, so in addition to the safe monitoring, a continuous or temporary flow measurement can also be performed.

Areas of application: Monitoring of cooling circuits in high-end equipment such as laser installations, HF generators etc.

Electrical Connection:

Measuring Transmitter (optional) SM-08. . .Ax

All SM-08 series of turbine flowmeters can be equipped with an integrated F/I measuring transmitter. With this they transmit an analogue signal output of 4. . .20mA instead of the im-pulse output.

Technical Specifications:

Output /	4. . .20mA, power limiting at ~26mA
Scaling /	as per Ordering codes SM-08.15, SM-08.25, SM-08.40. other scaling on request
Supply voltage /	18. . .30VDC
max. Power /	30 mA
max. Load /	250 Ohm to GND
El. connection /	4-Pin plug, M12 x 1
max. Media temp. /	80°C
Residual ripple /	0.2 mA _{SS} over the entire range
Type /	3-wire, galvanically not separated
Casing material /	PA
Protection class /	IP54

SM-11N

Stainless Steel Turbine Flowmeter

Features

- / Accuracy at $\pm 0.5\%$ of measured value
- / Operating ranges up to 550 m³/h
- / Suitable for plug-in display SD-01
- / Up to 400 bar
- / Carbide metal or PTFE bearings
- / Flange or tube connection

Description:

The turbine wheel of the flow meter SM-11N is positioned concentrically on both sides and it rotates inside the housing proportionally to the mean flow velocity. An inductive Pick-Up screw-mounted on the housing wall deflects the turbine wheel's rotational movement and outputs a sinus-shaped power signal to the amplifier below the plug connector which in turn generates a square-shaped impulse signal in the PNP 3-wire circuit. Optionally, the bearings for the SM-11N can be made of PTFE or carbide metal, while all other wetted parts are made of stainless steel. This allows the SM-11N to conveniently measure a wide range of low viscosity fluids.

Application:

The turbine flow meter SM-11N is used if flow volumes of low viscosity fluids need to be measured highly accurately. The permissible temperature range up to 120°C and pressure levels up to 400 bar make the device capable of handling a wide range of applications covering the entire industry. Depending on the process, the user can opt for a tube or flange connector. At the output of SM-11N a PNP transistor impulse signal is available which is compatible with most downstream evaluation devices and, if required, can be easily converted into a 4...20 mA or 0...10 V DC analogue output. Moreover, the Profimess plug-in display SD-01, can be mounted directly between the plug and the cable box of the SM-11N and does not require additional power supply, offering an excellent way to visualize the measured value.

Technical Specifications:

Accuracy /	see table „Bearing types“
Mounting position /	horizontal $\pm 5^\circ$
Housing material /	stainless steel 1.4541
Flange material /	steel 1.0566 or stainless steel 1.4541
Bearing material /	PTFE or carbide metal
Pressure /	see table for connector types
Media temperature /	-20°C to +120°C for steel flange connection -30°C to +120°C for stainless steel flange connection or tube connection
Ambient temp. /	-20°C to +60°C for steel flange connection -30°C to +60°C for stainless steel flange connection or tube connection
Required inlet section /	10 x pipe diameter to achieve the specified accuracy
Required outlet section /	5 x pipe diameter to achieve the specified accuracy

SM-16

Turbine Flowmeter for Fluid Media without Auxiliary Power Supply

Features

- / Counter and/or flowmeter versions
- / Local 6-digit LCD display
- / Battery-operated, replaceable
- / Aluminium, nylon or st. steel versions
- / Operating ranges up to 1135 l/min
- / Convenient dimensions for assembly
- / ATEX II 1G Ex ia IIC T6

Description:

The SM-16 series of turbine flowmeters consists of an interchangeable turbine which is built into a flow housing made of nylon, aluminium or stainless steel and a local evaluator and display electronic unit. This functions as a total and a partial volume counter and as a flowmeter. The turbine wheel is set into rotation by the streaming medium. The ferrites embedded into the turbine blades are scanned through an inductive pick-up system. The sequence of impulses generated thus is proportional to the flow and is displayed by means of a microprocessor controlled electronic unit.

Application:

Due to the interchangeable battery the devices do not depend on external power supply and, therefore, they can be deployed without extensive cabling wherever flow volumes need to be accurately measured or counted locally. The integrated microprocessor allows on-the-spot calibration with the result that accuracy is increased or the device can be adjusted, apart from water, for even highly viscous media.

Technical Specifications:

Medium /	low-viscosity (higher viscosities with on-the-spot calibration)

max. Temperature /	-18...+60 °C
max. Pressure /	
Al-housing:	20 bar
Nylon-housing:	10 bar
St. steel-housing:	100 bar - A high pressure version up to 200 bar for the st. steel housing is available on request.
Supply /	2x lithium battery, approx. lbattery life: 5 years
Display /	LCD, 6-digit automatic On and Off switching
Accuracy /	only applies to low-viscosity liquids:
Range 11:	bis ± 5% ***
Range 12,13,14:	± 1.5%
Range 15,16:	± 1.0%
Range 17,18:	± 0.75% (± 1.0% possible with on-site calibration)
*** Accuracy can vary up to ± 5% depending on installation and fluid type. Field calibration is recommended for best accuracy.	
Protection class /	IP 44

Special Versions /

For the operating range 10...100 l/min, a low-cost version of the SM-16 for petrol, diesel and kerosene in aluminium or another version for water in nylon that operates with accuracy of 5 % and up to 20 bar for aluminium housing, 10 bar for nylon housing pressure is available (without ATEX approval). The max. operation temperature is from -10...+54°C. These versions function purely as flow counters.

Ordering Codes for this Version:

PF-222

Portable Ultrasonic Liquid Flowmeter according to Transit-Time Difference Method

Description:

The portable ultrasonic liquid flow meters of the PF series measure the flow in a closed pipe according to the cross correlation method without the need for any mechanical parts to be inserted through the pipe wall. Two ultrasonic transducers are mounted to the pipe with a fastening rail. In the course of commissioning, individual data of the measuring point, like for example the medium, pipe material, pipe diameter, wall thickness etc., is entered into the transmitter. The ideal separation distance of the two transducers is then calculated by the transmitter in response to the entered data concerning the pipe and fluid characteristics. In the measuring mode the transducers work alternating as emitter and receiver. The transit time of the ultrasound between the transducers is measured once in flow direction and once against the flow direction. Because the ultrasound transmitted in the same direction as the liquid flows is faster than against it, a time difference which is directly proportional to the flow velocity of the liquid and independent of the individual features of the fluid results. The PF-222 is capable to transmit the recorded flow data as analog output or pulse output and also in alphanumeric text on the built-in LCD backlit graphic display as flow rate or velocity together with totalized values. The internal battery of the PF-222 allows up to 14 hours of operating time, depending on the output utilisation and backlight usage. The PF-222 is delivered either with transducers A for pipe sizes 13 mm to 115 mm or with transducers B for pipe sizes 50 mm to 1000 mm.

NEW: The PF-222 can now be operated with both sensor pairs A/B.

Application:

- Building services
- Pump verification
- Leak detection
- Fuel oil measurement
- Filter sizing and inspection
- Ultrapure water
- Hydraulik system testing
- Heavy fuel oil
- Balancing systems
- and much more...

Features

- / Measurement through the pipe
- / Non-contacting
- / Easy to install
- / For pipes up to 1000 mm
- / Operating temp. up to 135°C
- / Reynoldsnumber correction
- / Cost effective
- / Ideally suited for difficult media

Dimensions in mm:

Technical Specifications:

Equipment
PF-222.A / evaluation unit with backlit graphic display
 0/4...20 mA-output
 language options:
 German, English, French, Spanish
 transducers A or

PF-333

Portable Ultrasonic Liquid Flowmeter according to Transit Time Difference Method

Description:

The portable ultrasonic liquid flow meters of the PF series measure the flow in a closed pipe according to the transit-time difference method without the need for any mechanical parts to be inserted through the pipe wall. Two ultrasonic transducers are mounted to the pipe with a fastening rail. In the course of commissioning, individual data of the measuring point, like for example the medium, pipe material, pipe diameter, wall thickness etc. is entered into the transmitter. The ideal separation distance of the two transducers is then calculated by the transmitter in response to the entered data concerning the pipe and fluid characteristics. In the measuring mode the transducers work alternating as emitter and receiver. The transit time of the ultrasound between the transducers is measured once in flow direction and once against the flow direction. Because the ultrasound transmitted in the same direction as the liquid flow is faster than against it, a time difference which is directly proportional to the flow velocity of the liquid and independent of the individual features of the fluid results. The PF-333 is capable to transmit the recorded flow data as analog output or pulse output and also in alphanumeric text or graph on the built-in LCD backlit graphic display as flow rate or velocity together with totalized values. The internal battery of the PF-333 allows up to 14 hours of operating time depending on the output utilisation and backlight usage. The internal logger can store up to 100.000k data points. By use of the provided Windows® based software the logged data can be output directly to a PC using the RS232/USB interface or stored in the instrument`s non-volatile memory for downloading at a later time.

Features

- /NEW: Optional as heat meter

PF-D550

Portable Doppler Flow Meter for Dirty or Aerated Liquids

Features

- / Measurement through the pipe
- / Easy calibration
- / No pressure drop
- / Ideal for problem liquids
- / For pipes ½" to 180" ID
- / Operating temp. up to 120°C
- / 300,000 point data logger
- / 4...20 mA output (AC powered)
- / 10-Digit totalizer
- / AC/DC operation
- / Built-in rechargeable battery

Description:

The PF-D550 ultrasonic sensor injects high frequency sound through the pipe wall and into the flowing liquid. Gas bubbles or solids suspended in the liquid reflect the ultrasonic signal back to the sensor. When this sound is reflected from moving bubbles or particles it is returned to the sensor at an altered frequency. This frequency shift is called the Doppler effect. The PF-D550 continuously measures the change from its transmitted frequency to the received frequency to accurately calculate flow.

Application:

The PF-D550 works best with difficult liquids in applications that would damage regular flow meters. Because the sensor is mounted on the outside of the pipe, there is no contact with the moving fluid. The ultrasonic sensor straps onto the outside of pipes 12.5 mm (½") ID or larger and measures flow in common pipe materials: PVC, carbon steel, stainless steel, cast iron, fiberglass and lined pipes... any pipe that conducts ultra-sound. Doppler signals cannot be transmitted through pipe walls which contain air pockets (materials like concrete and wood), or loose insertion liners (with an air gap between the liner and pipe wall). Because the sensor is so easy to install you can test any application and pipe material in a few minutes.

Recommended for: Sewage, Treated Wastewater, Aerated Water, Sludge and Slurries, Chemicals and Solvents, Viscous Liquids, Abrasives, Food Products, Pulp Stock, Acids and Caustics.

U-1000

Ultrasonic Flow Meter based on Transit Time Difference Method for permanent Installation

Description:

The U-1000 is a clamp-on, ultrasonic flowmeter that uses a multiple slope transit time algorithm to provide accurate flow measurements. An ultrasonic beam of a given frequency is generated by applying a repetitive voltage pulse to the transducer crystals. This transmission goes first from the Downstream transducer to the Upstream transducer. The transmission is then made in the reverse direction, being sent from the Upstream transducer to the Downstream transducer. The speed, at which the ultrasound is transmitted through the liquid, is accelerated slightly by the velocity of the liquid through the pipe. The subsequent time difference is directly proportional to the liquid flow velocity. Having measured the flow velocity and knowing the pipe cross-sectional area, the volumetric flow can be easily calculated. The U-1000 is scheduled for fixed installation, easy to install and requires the minimum of information to be entered by the user. The instrument displays the required separation after the pipe internal diameter and material are entered. Both the electronics and guide rail housings form an integral unit that is attached to the pipe using the supplied jubilee clips. Power to the unit is provided by an external 12 - 24V AC/DC power supply. The U-1000 is intended to operate on steel, copper and plastic pipes with maximum 180 (225) mm OD. Compact, rugged and reliable, the U-1000 has been designed to provide sustained performance in industrial environments.

Application:

Flow-metering and monitoring as:
Hot water meter, heat meter, chilled water meter, drinking-water meter, ultrapure water meter and for process water

Features

- / **NEW: wall mounted display**
- / **Measurement through the pipe**
- / **Easy calibration**
- / **For steel-, plastic- or copperpipes**
- / **For 22 (25) mm to 115 mm OD**
or 125 mm to 180 (225) mm OD
- / **Operating temperatures up to 85°C**
at wall mounted display up to 135°C
- / **LCD display with backlights**
- / **Integrated pulse or frequency output**
- / **4 to 20 mA output (optional)**
- / **Modbus (optional)**
- / **Supply 12 to 24V AC/DC (external)**

Version:

U-1000 Ultrasonic Flow Meter

- / Measurement of the flow velocity and flow rate
- / Recommended for hot water < 85°C, chilled water, portable water and demineralised water
- / Configurable pipe size between 22. . .115 mm or 125. . .180 mm outer diameter
- / Pipe materials: steel, plastic and copper
- / Simplified guide rail & sensor assembly
- / Clamp-on sensor
- / LCD display with backlight
- / Display: 2 line x 16 characters
- / Key pad: 4 key tactile feedback membrane keypad
- / Password controlled menu structure
- / Menu language: english

U-1000 HM

Fixed Ultrasonic Heat/ Energy Meter with Modbus Communication

Description:

The U-1000 HM is a clamp-on thermo-, heat- and energy meter based on ultrasound which is installed on the outside of a pipeline without any complications. The device measures the flow and return temperatures via PT100 sensors and the flow rate with ultrasound. An ultrasonic beam of a given frequency is generated by applying a repetitive voltage pulse to the transducer crystals. This transmission goes first from the Downstream transducer to the Upstream transducer. The transmission is then made in the reverse direction, being sent from the Upstream transducer to the Downstream transducer. The speed, at which the ultrasound is transmitted through the liquid, is accelerated slightly by the velocity of the liquid through the pipe. The subsequent time difference is directly proportional to the liquid flow velocity. Having measured the flow velocity and knowing the pipe cross-sectional area, the volumetric flow can be easily calculated. The temperature sensors measure the heat difference at the inlet and the outlet point. Together with the flow rate, the U-1000 HM then calculates the corresponding amount of heat. The values can be output individually or summed. In addition, there is a Modbus compatibility so that the device can also be used as a component in an aM & T or BEM system. The U-1000 HM is designed like the U-1000 for fixed installations. It is easy to install and requires a minimum of information that must be entered by the user. The device requires 12-24V AC/DC from an external source. The U-1000 HM is designed to work on steel, copper and plastic pipes with an outside diameter up to 180(225) mm.

Features

- / **NEW: wall mounted display**
- / **Heat- and Energy-measuring**
- / **Easy installation**
- / **For pipes with 22(25) - 115 mm OD
or 125 - 180(225) mm OD**
- / **Water temperature up to 85 °C
at wall mounted display up to 135 °C**
- / **Modbus compatible**
- / **Single values and sums**
- / **Mbus (optional)**

Application:

Heat-metering and monitoring as:
Warm water meter, heat meter, chilled water meter, drinking-water meter, ultrapure water meter and for process water.

Electrical Specifications:

Power supply /	12 V . . 24 V ± 10 % AC/DC at 7 watt

TG-01

Ultrasonic Thickness Meter

Features

/ 11 common materials pre-configured

/ Battery powered

/ Easy to use

Description:

The ultrasonic wall thickness meter TG-01 can measure the layer thickness of a variety of materials because of their different sound speed ranges. There are 11 pre-configured materials. The device uses a specially developed, microprocessor controlled circuit to quickly calculate the run time of the reflected ultrasonic pulse with high accuracy. The TG-01s speed of sound can be adjusted between 500. .9000 m/s to determine the layer thickness of any materials. This has also the advantage, that the coating of a pipe does not need to be removed (non-destructive measurement).

Application:

The TG-01s typical applications are to find the wall thickness of the pipe when programming a clamp-on ultrasonic transmitter without cutting or removing a section of the pipe. But it can also be used to test for wearing out of materials, corrosion and coating, for industrial applications, within the car- machine- or tool-industry, as well as for safety maintenance for any other kind of hollow body.

Technical Specifications:

Measuring range /	1.5 ...200 mm wall thickness
Resolution /	0.1 mm
Display /	10 mm, 4-digit, LCD
Battery /	4 x 1.5V AAA
Sound velocity /	500. . .9000 m/s (configurable)
Accuracy /	± 0.5%
Humidity /	< 80%
Temperature range /	0. . .50 °C
Materials /	steel, cast iron, aluminium, red copper, brass, zinc, quartz glass, polyethylene, PVC, gray cast iron, nodular cast iron
Dimensions /	120 x 60 x 30 mm
Weight /	approx. 170 g without battery
Certificate /	CE

Miniature- Electromagnetic Flowmeter

Features

- / Wetted parts out of st. steel 1.4404, PEEK and FKM
- / Displays flow bidirectionally
- / Op. range 0. . .600 l/min in 5 sizes
- / Additional temperature measurement from -20. . .+80°C
- / Minimum conductivity 20 µS/cm
- / Viscosity up to 70 mm²/s at 40°C
- / Two output channels for 4. . .20 mA or 0. . .10 VDC, pulse or alarm
- / Including totalizer and batching function
- / Operating pressure up to 16 bar

Description:

The measuring principle of the magnetic flow meter is based on Faraday's law. The flow of a conductible liquid within a magnetic field causes an electrical voltage, which is proportional to the velocity of the flow. A measuring pipe out of the very rugged plastic material PEEK is installed in the stainless steel fitting of the SI-00. This construction is suitable to isolate the liquid from the metallic fitting to make the induced measuring voltage useable. Magnetic coils located on the outside generate a magnetic field inside the measuring pipe and small stainless steel electrodes measure the voltage, which is then amplified and processed by the powerful electronic of the SI-00.

Application:

The electromagnetic flowmeter SI-00 combines the advantage of the electromagnetic measuring principle and an ultramodern amplifier electronic to a device of the latest generation. There are no wishes left regarding easy operation and versatility of the measuring value processing. The device detects and processes the medium temperature, the actual flow and the fluid consumption. Setpoints, as well as analogue and pulse signals in different combinations are provided by the SI-00 at two output connections. The setpoints can be programmed as N.O./N.C. or window function always with adjustable hysteresis. In case of activated start-up delay the setpoints work at the normal operating condition within the programmed period of time as soon as the flow reaches 0,5% of the full scale value after switch on, to ensure that no alarm occurs if the flow value is under the threshold just because of the starting condition of the plant or machine. The analogue output can be used as 4. . .20 mA- or 0. . .10 VDC-signal and can be assigned to the temperature or to the flowrate. Zero and span are free adjustable, but the minimum measuring span has to be 20% of the full scale value. The consumption is added or subtracted (depending on the flow direction) by the SI-00 and displayed. The positive flow direction is marked with an arrow on the unit. The outputs of the SI-00 always refer to the positive direction.

The counter is reset either through external pulse, through programmable automatic reset time from one hour to eight weeks or manually by the touch of a button. One of the outputs of the SI-00 can be used to realize a batching process. In this operating mode the switching output of the SI-00 is activated to control e.g. a solenoid valve after the preset amount has passed through the flowmeter. In case of not reaching the preset amount the user can choose either to wait for further flow or to reset the counter automatically.

Electrical Specifications:

Supply voltage / 18...32 VDC acc. to EN50178, SELV, PELV

Current rating /
 SI-00.08: 200 mA
 SI-00.15: 2 x 200 mA
 SI-00.20: 2 x 200 mA
 SI-00.25: 2 x 200 mA
 SI-00.50a: 2 x 250 mA
 SI-00.50b: 2 x 250 mA

Short-circuit protection / pulsed

Reverse polarity protection / yes

Overload protection / yes

Voltage drop / < 2 V

Current consumption /
 SI-00.08: < 80 mA
 SI-00.15: 95 mA;(24 V)
 SI-00.20: 95 mA;(24 V)
 SI-00.25: 95 mA;(24 V)
 SI-00.50a: < 150 mA
 SI-00.50b: < 150 mA

Power-on delay / 5 s

Analogue output / 4...20 mA or 0...10 VDC, scaleable

Load for analogue output /
 max. 500 Ω for 4...20 mA,
 min. 2000 Ω for 0...10 VDC

Pulse output / flow rate meter

Pulse value /
 SI-00.08: 0,001...3 l
 SI-00.15: 0,00001...30 000 m³
 SI-00.20: 0,00001...50 000 m³
 SI-00.25: 0,00001...100 000 m³
 SI-00.50a: 0,0001...300 x 10³ m³
 SI-00.50b: 0,0001...600 x 10³ m³

Pulse length / (not adjustable)
 SI-00.08: 0,008...2 s
 SI-00.15: 0,01...2 s
 SI-00.20: 0,005...2 s
 SI-00.25: 0,0025...2 s
 SI-00.50a: 0,016...2 s
 SI-00.50b: 0,008...2 s

Programming options /

SI-00.08 /15 /20 /25: Flow monitoring; volume counter; preselection counter; temperature monitoring; hysteresis / window function; start-up delay; output logic; current / voltage / pulse output; N.O./ N.C.; display can be deactivated; display unit;

SI-00.50a/ 50b: Flow monitoring; volume counter; preselection counter; temperature monitoring; hysteresis / window function; start-up delay; output logic; current / voltage / pulse output; N.O./ N.C.; display can be deactivated; display unit; empty tube detection;

Protection class / IP 65 / IP 67

Insulation resist. / >100 MΩ (500 VDC)

EMC / DIN EN 60947-5-9

Electrical connection / M12 connector; gold-plated contacts

Display /

Measuring unit: 6 LED green (l/min, m³/h, l, m³, 103, °C)

Switching status: 2 LED yellow

Measured values: 4-digit alphanumeric display

Programming: 4-digit alphanumeric display

Wiring:

Plug connection /

OUT1 (SI-00.08 /15 /20 /25) /

4 selection options:

- switching output flow-detector
- pulse output flow
- switching output preset counter
- IO-Link

OUT1 (SI-00.50a /50b) /

6 selection options:

- switching output empty pipe detection
- switching output flow-detector
- frequency output flow-detector
- pulse output flow
- switching output preset counter
- IO-Link

OUT2/InD (SI-00.08 /15 /20 /25) /

5 selection options:

- switching output flow-detector
- switching output temperature-detector
- analogue output flow
- analogue output temperature
- input for an external reset signal

OUT2/InD (SI-00.50a /50b) /

6 selection options:

- switching output empty pipe detection
- switching output flow-detector
- switching output temperature-detector
- analogue output flow
- analogue output temperature
- Input for an external reset signal

Technical Specifications:

Application /	conductive liquids, fluid group 2 (DGRL) conductivity from 20 µS/cm upwards and viscosity up to 70 mm ² /s at 40°C
Pressure drop /	max. 16 bar (max. 10 bar for SI-00.08)
Medium temp. /	-10...+70°C (0...+60°C for SI-00.08)
Ambient temp. /	-10...+60°C
Storage temp. /	-25...+80°C

SI-01

Electromagnetic Flowmeter for Water Applications

Features

- / Cost-effective
- / Separate or compact measuring transmitter
- / NBR or EPDM lining
- / DN25 to DN1200
- / DIN or ANSI flange

Description:

The SI-01 series of electromagnetic flowmeters is always a combination of measuring pick-up SI-01 and measuring transmitter MU-5000 which can be either directly mounted on the pick-up or separately mounted on the wall by means of a fixing metal plate. The measuring pick-up consists of a magnetically non-conductive measuring tube with plastic lining, magnetic coils fastened diametrically on the tube and at least two electrodes which are inserted through the tube's wall and establish contact with the measuring medium. As current passes through the magnetic coils, a clocked magnetic field is generated which penetrates the magnetically non-conductive measuring tube and induces in the electrically conductive medium a voltage proportional to the flow velocity. The electrodes inside the tube tap this voltage and pass it on to the measuring transmitter MU-5000. Now the transmitter generates a current signal in the range of 4...20 mA which is linearly connected to the mean velocity of flow. The measuring pick-up has a SENSORPROM memory module in which its individual data is stored. The result is that nearly every measuring pick-up of the SI-01 series can be operate along with every MU-5000 measuring transmitter without the need for prior parameterization.

Application:

Electromagnetic flowmeters are suited for measuring nearly all electrical-conductive fluids, pulp and slurry that have a conductivity of at least 5 micro-Siemens. Temperature, pressure, density and viscosity are of no consequence for the method of measurement so long as the measurement is performed within the velocity range of 0.25...10 m/s and the permissible material specifications do not fall short or are not exceeded. The main applications for the SI-01 series are found in the following areas, Water removal, Water treatment, Water distribution, Effluent treatment, Industrial water applications and Filtration installations. For applications that necessitate higher temperatures or pressure, more hostile media or other nominal diameter ranges, the high-quality measuring pick-up of the SI-02 offers a reliable solution.

Technical Specifications:

Measuring principle /	electromagnetic induction
Exciter frequency /	1.56 Hz...12,5 Hz depending on ND
Conductivity of medium /	at least 5 µS/cm (micro Siemens)
Operating range /	0.25...10 m/s for the specified accuracy, below and above this greater deviations

Electrical Spec. Transmitter:

Cable insertion /	M20 x 1.5 or 1/2"-NPT
Protection class /	IP67 (IP68 on request)
EMC /	2014/30/EU

(see also Measuring transmitter MU-5000)

Measuring transmitter /

In principle, the SI-01 is suited for operations with a directly mounted measuring transmitter or for separate mounting. The MU-5000 measuring transmitter can be used universally (see data sheet MU-5000), hence it can be mounted directly on the measurement pick-up or positioned away from it by means of a wall fixture. If the SI-01 is required as a spare, since the MU-5000 measuring transmitter is already available, only the measurement pick-up can be ordered without the measuring transmitter.

Electromagnetic Flowmeter for General Applications

Features

- / Universally applicable
- / Separate or compact measuring transmitter
- / Variety of lining material
- / DN15 to DN2000
- / DIN- or ANSI flanges
- / High-temperature version
- / Pressure level up to PN100

Description:

The SI-02 series of electromagnetic flowmeters is always a combination of measuring pick-up and measuring transmitter MU-5000 which can be either directly mounted on the pick-up or separately mounted on the wall by means of a fixing metal plate. The measuring pick-up consists of a magnetically non-conductive measuring tube with plastic lining, magnetic coils fastened diametrically on the tube and at least two electrodes which are inserted through the tube's wall and establish contact with the measuring medium. As current passes through the magnetic coils, a clocked magnetic field is generated which penetrates the magnetically non-conductive measuring tube and induces in the electrically conductive medium a voltage proportional to the flow velocity. The electrodes inside the tube tap this voltage and pass it on to the measuring transmitter MU-5000. Now the transmitter generates a current signal in the range of 0(4) . . 20mA which is linearly connected to the mean velocity of flow. The measuring pick-up has a SENSORPROM memory module in which its individual data is stored. The result is that nearly every measuring pick-up of the SI-02 series can be operate along with every MU-5000 measuring transmitter without the need for prior parameterization.

Application:

Electromagnetic flowmeters are suited for measuring nearly all electrically conductive fluids, pulp and slurry that have a conductivity of at least 5 micro-Siemens. Temperature, pressure, density and viscosity are of no consequence for the method of measurement so long as the measurement is performed within the velocity range of 0.25 . . 10 m/s and the permissible material specifications do not fall short or are not exceeded. Applications for the SI-02 series are found in a wide range of industrial segments since the material combinations ensure resistance to nearly all media in respect of different electrodes and lining materials.

- Protection class /** IP67 (IP68 on request)
- EMC /** 2014/30/EU

(see also Measuring transmitter MU-5000)

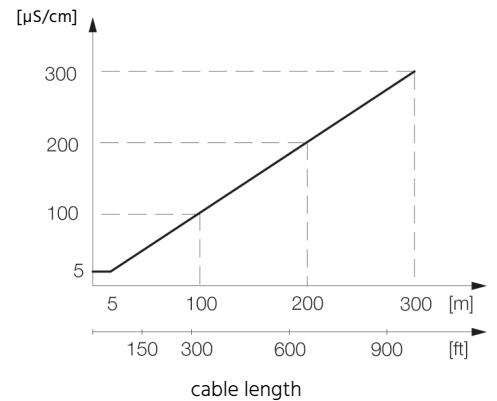

Measuring transmitter /

In principle, the SI-02 is suited for operations with a directly mounted measuring transmitter or for separate mounting. The MU-5000 measuring transmitter can be used universally (see data sheet MU-5000), hence it can be mounted directly on the measurement pick-up or positioned away from it by means of a wall fixture. If the SI-02 is required as a spare, since the MU-5000 measuring transmitter is already available, only the measurement pick-up can be ordered without the measuring transmitter.

Separate mounting /

Flow-Nomogramm SI-01 / SI-02:

VO-01

Low-Volume Oval Gear Flowmeter

Description:

The VO-01 low volume oval gear flowmeter measures fluids in the viscosity range of 5 to 200 cSt according to the principle of positive displacement. Two interlocked oval gear-wheels made of PEEK rotate inside the measuring chamber as a result of the flow and, effectively, defined volumes are channelled through the VO-01 proportional to the rotating speed. An externally mounted electronic element records the rotating speed of the oval gear-wheel pair by means of a non-contacting Hall effect sensor that emits a voltage impulse whenever a magnet crosses it and, through an amplifier, produces a rectangular impulse signal at the PINs of the plug connector. In the version with 2-wire output the impulse signal is readily converted internally into a power signal. In contrast to this, in the case of the 3-wire version, as also in a variant with impulse output and two additional threshold value relays, a VO-01 equipped with a "normal" impulse output can be easily converted into a flowmeter with 3-wire power output or one with a Push-Pull impulse output and threshold value relays by replacing the mating plug.

Features

- / Plastic or stainless steel housing
- / Measuring range from 8 l/h
- / Cost-effective
- / 4...20 mA or pulse output
- / Optionally with switching contacts
- / Intended for fluid viscosities
from 5 to 200 cSt

Application:

Oval gear flowmeters of VO-01 series offer a cost-effective solution when low volume flows in the range of low to medium viscosities need to be measured and monitored. For the housing, the materials used can be polypropylene, ECTFE and stainless steel; however, the oval gear-wheels are always made of PEEK. Therefore, it is possible to design a device in a way that only plastics come into contact with the flow medium. The result is that the range of application of the VO-01 is extended to measuring even hostile fluids which, otherwise, are corrosive on metals. Typical applications for the VO-01 are, for example:

- monitoring lubrication points
- measuring consumption of fuel or lubricants
- manufacturing of paints and dyes
- processing of solvents.

Relay 2-A				pink
Relay 2-B				blue

Electrical Specifications:

Pulse output (VO-01.xx.xx.xx.xx.IM) /

Function:	complementary final stage (suitable for PNP- or NPN-inputs)
Supply voltage:	+4.5...+24 VDC
Current:	max. 11 mA at 24 VDC
El. connection:	plug connector as per EN 175301-803A (cubical-shaped) or round cable LiYY 3 x 1.4 mm ² , length 3 m
Protection:	IP65

Analogue output 2-wire (VO-01.xx.xx.xx.xx.A2) /

Supply voltage:	+15...+24 VDC
Current:	4...20 mA, 2-wire
Damping:	factory adjustable in steps of 1 sec.
El. connection:	plug connector as per EN 175301-803A (cubical-shaped)
Protection:	IP65
Ambient temp. at plug connector:	max. 55°C

Analogue output 3-wire (VO-01.xx.xx.xx.xx.A3) /

Supply voltage:	+15...+24 VDC
Current:	10...40 mA
Damping:	factory adjustable in steps of one sec.
El. connection:	plug connector as per EN 175301-803A (cubical-shaped)
Protection:	IP65
Ambient temp. at plug connector:	max. 55°C
Mounting:	The electronic modul is easily plugged between the plug connector and the mating plug of the SD-05 and transforms the pulse output into an analogue output. The correlation between analogue output and operating range is adjusted with a REED switch at the plug connector. This electronic modul can be field upgraded at any time.

Pulse output Push-Pull and two additional threshold value relays (VO-01.xx.xx.xx.xx.FK) /

Supply voltage:	+4.5...+24 VDC
Current:	10...220 mA
Damping:	factory adjustable in steps of one second
Outputs:	1 x complementary final stage (11 mA, 24 VDC), 2 x semiconductor relays (0.1 A / 24 VDC)
El. connection:	plug connector as per EN 175301-803A (cubical-shaped) with one meter factory connected cable
Protection:	IP65
Ambient temp. at plug connector:	max. 55°C
Mounting:	The electronic modul is easily plugged between the plug connector and the mating plug of the SD-05 and transforms the pulse output into Push-Pull output (suitable for PNP and NPN inputs). Additionally two alarm outputs are provided. The correlation between analogue output and operating range and the setpoints are adjusted with a REED switch at the plug connector. This electronic modul can be field upgraded at any time.

Pressure Drop:

Range 14. . .80 l/h

VO-02

Miniature Oval Gear Flowmeter

Features

/ Aluminium or st. steel

/ Small build

/ For ranges from 0,001 l/min

/ Up to 80 bar

/ From 0,5 mPas

Description:

In addition to our proven oval gear flowmeters series VO-01, the new series VO-02 has been designed for tiny ranges (from 0,001 l/min). These meters are very precise and can measure the smallest amounts of fluid. These instruments are using the volume-measuring principle, where the media running through the housing sets gears into motion. Within those gears are magnets, which trigger a Hall-sensor. The sensor then sends out squarewaves, whose frequency is proportional to the flowing media. Whether the meter is used for low or highly viscose media, the volume of the tooth space remains the same, so the meters can be used either way. The VO-02 has a standard PNP impulse output, while the housing is available in either aluminium or stainless steel.

Application:

The VO-02 are perfectly designed for measuring the flow of oils. For example mineral- and plant-oils, plant based fuels, diesel and a variety of lubricants.

/ Low pressure drop

/ High pressure resistance

/ Convenient dim. for assembly

Description:

The VM-01 series of the flowmeter measuring sensor consists of a pair of toothed wheels which is driven by the flow of fluid according to the working principle of a gear-wheel pump. The bearing for the measuring sensor is designed as a radial and axial sliding contact bearing (VM-01.2: ball bearing). The gear-wheel movement is scanned by means of a magneto-resistive sensor that is hermetically separated from the measuring chamber. The gear-wheel diameter of the VM-01 is ideal due to its low resistance to flow and especially low sound level.

Application:

The gear-wheel flowmeters of the VM-01 series are mainly used for measuring consumption, control of filling operations and for monitoring lubrication points. Due to their small dimensions and, particularly, due to the low pricing, they are suitable for OEM applications.

Versions and Ranges:

Type	Op. range (l/min)	Viscosity range (cSt)	Connection	Geo. tooth volume cm ³	Resolution (pulse/l)

SD-01

Plug-In Display for Gear-Wheel Sensors

Features

- / Display and F/I converter
- / Capable to simple dosing
- / No additional auxiliary power supply
- / Upgrade for sensors already supplied

Description:

The SD-01 series is a universally applicable on-the-spot display for all gear-wheel volume sensors of Profimess GmbH provided with the plug connection as per DIN43650. The display is simply inserted between the plug and plug socket of the volume meter. Optionally, the display unit can display the flow as the current value or the accumulated volume as the sum. In the basic version, the SD-01 transmits the rectangular signal from the gear-wheel volume sensor without modifying it. In the next extended level, the device is equipped with a F/I converter which translates the rectangular signal in into a freely parametrizable 0(4) to 20mA signal. Another method is to equip the display unit with two relay contacts which can be used for monitoring MIN/MAX parameters of a flow volume or to implement a simple dosing function. All necessary settings for the SD-01 are stored in an EEPROM and are preserved even in the event of a power failure. If previously supplied gear-wheel volume sensors need to be upgraded with the SD-01, the user can remove just the plug PCB of the sensor and mount the display unit without much effort.

Application:

In practice, use of impulse emitting volume sensors is widely popular. Often the user wishes, on the one hand, to process the measured value within his guide system but, on the other hand, also make it available on-the-spot so as to optically monitor maintenance work or regulating operations. Also, many controls are capable of processing only analogue inputs but not impulse signals or, for this purpose, an expensive impulse input card must be added. The SD-01 plug-in display offers an ideal and cost-effective solution to this problem. This version with the display of the accumulated volume and two relay contacts is moreover capable of dosing through the connected volume sensor by connecting one of the relay outputs to a magnetic valve and by utilizing the second as the START/STOP input. This feature turns the volume sensor/SD-01 unit into a practical dosing system.

Electrical Specifications:

Supply voltage /	10...19 VDC or 18...28 VDC
Power consumption /	120 mA max.

VM-04

High-Precision Gear-Wheel Volume Sensor for Viscous Fluids

Features

- / For viscosities above 1 cSt
- / Excellent price to performance ratio
- / Cast or st. steel versions available
- / Accuracy better than 0.3% of MV
- / High resolution
- / Pressure-proof up to 400 bar
- / Convenient dim. for assembly

Description:

The VM-04 series of the flowmeters measuring sensor consists of a pair of toothed wheels which is driven by the flow of fluid according to the working principle of a gear-wheel pump. The bearing for the measuring sensor is designed as a radial or axial sliding contact bearing. The gear-wheel movement is scanned by means of two magneto-resistive sensors which are phase displaced by 90° and hermetically separated from the measuring chamber. The two-channel scanning enables a higher resolution of measurement and detection of direction of flow by means of suitable electronic devices. Optionally, all devices can be supplied with an explosion-proof design with separate switching amplifier. The gear-wheel flowmeter VM-04 is outstanding due to its low resistance to flow and especially low sound level.

Application:

Due to their excellent accuracy of measurement along with high resolution, these devices are especially suited for use in test beds for measuring small and least volumes of flow. Some of the areas of deployment are:

- Measurement of consumption
- Controlling filling operations
- Dosing oils and chemicals
- Measurement of flow for paints and varnishes
- Ratio regulation for polyol and isocyanate

VS-02

Screw Spindle Flowmeter for Viscous Fluids

Features

- / Viscosity independent up to 40k cSt
- / Light and compact design
- / Bi-directional operation
- / Switching-, analogue- or pulse outputs
- / Cost-effective
- / Ranges up to 3800 l/min
- / Applicable up to 350 bar
- / Media temperature up to +150°C

Description:

The screw spindle flowmeter series VS-02 is developed for metering lubricating and viscous fluids in accordance with volumetric principle employing two cycloid steel spindles with a screw-shaped profile to rotate as the medium passes the flow chamber. The spindles form a geometric precise defined measuring chamber, through which accurately measured fluid is forwarded which is then detected by the Hall sensor outside the flow chamber. The output of the basic version VS-02.2 is pulse signal which may be connected to serve back-end PNP or NPN inputs, it supplies a square wave signal. With further options electronic housings can be screwed on the flowmeter body. These different electronics amplify the signal and deliver current or voltage outputs and/or drive the LCD-display. The electronic sensors are replaceable during active operation since the sensors never have contact to the medium.

Application:

Typical applications for the screw spindle flowmeter series VS-02 are cost-effective measurements of large volume flow of viscous fluids up to 3800 l/min. The flowmeters are also applicable for aqueous fluids like soap, paste or emulsions, and specially for oil, which show no abrasive behavior and which are compatible to the used materials of the flowmeter. Because of the volumetric principle of the VS-02 almost no viscosity depended error occurs up to 40 000 cSt. The units can be operated according to their corresponding versions up to 350 bar and +150°C.

VS-02 Screw Spindle Flowmeter
for Viscous Fluids

Size and operating range /

- 1 = 1" up to 140 (200) l/min
- 2 = 1 1/4" up to 350 (500) l/min
- 3 = 1 1/2" up to 550 (800) l/min
- 4 = 1 1/2" up to 800 (1200) l/min
- 5 = 2" up to 1000 (1600) l/min
- 6 = 2" up to 1500 (2200) l/min
- 7 = 2 1/2" up to 2500 (3800) l/min

Process connection /

- 1 = female thread BSP
- 2 = steel SAE-flange* with female thread G

Connection material /

- 1 = aluminium, anodised
- 2 = steel

Output signal /

- 1 = screwed-in frequency pick-up with one Push-Pull switching output (Min or Max)
- 2 = pulse output Push-Pull
- 3 = screwed-in frequency pick-up with analog output 0 to 10 VDC
- 4 = screwed-in frequency pick-up with analog output 4 to 20 mA, 3-wire
- 5a = digital display unit with 2 transistor switching outputs, graphic display and 4 to 20 mA
- 5b = digital display unit with 2 transistor switching outputs, graphic display and 0 to 10 VDC-output

Options /

- 0 = none
- HT = high-temperature up to +150°C

* The use of steel SAE flanges enables the sensor to be installed and removed more easily and increases the stability to pressure. In conjunction with connection material aluminum 6082 anodised only.

VZ-01

Oil Counter for Light to Heavy Fuel Oil

Features

- / Mounting on pressure or suction side
- / Space-saving and flexible mounting
- / Temperature-independent
- / Viscosity-independent

Description:

The VZ-01 series of volume counters are rotary piston meters that function without auxiliary electrical power. A hollow slitted cylinder is situated in a cylindrical housing. Due to the guide slot, the cylinder makes oscillating movements as soon as the measuring chamber is flooded with the medium. The piston movement is transmitted magnetically to a totalizing roller counter which totalizes the volume of flow over a certain period. If necessary, the counter can be equipped with a remote value emitter designed as a reed or inductive contact which will transmit an electrical impulse for each defined volume.

Application:

Rotary piston meters are used wherever flow of oil or liquid fuel needs to be tapped in a simple but highly accurate method without depending on auxiliary electrical power. Some of the typical examples are in its deployment in the bunker piping in ships or as measurement of consumption in the forerun and return in diesel engines. Using the VZ-01 even simple dosing processes can be controlled where even hostile media can be measured by using special type of materials (Teflon or stainless steel pistons, stainless steel chamber). A major advantage of the volume counters is that the outcome of measurement does not depend on temperature and viscosity. This represents a plus point in some applications as against float devices or measuring turbines.

Technical Specifications:

Counter /	roller counter in litres
Process connection /	flange- or thread connection
Flow range /	0.5 up to 30000 l/h
Permissible media /	heating fuel (extra-light, light, medium and heavy), Naphta, Bunker C, gasoil and other lubricating media
Options /	display in US-gallons (1 gallon corresponds to 3.785 litres) outpaired units for differential measurement of fuel consumption approvals as per GL, LR and DNV

Electrical Specifications:

Switching element /	RE, RV = Reed-tubes with protective gas contact IN = inductive slit initiator as per IEC 60947-5-6
Switching voltage /	RE, RV = max. 48 V DC/AC protection class III (SELV) IN = 5 to 15 VDC
Switching current /	RE, RV = max. 50 mA ($R_i = 47 \Omega / 0.5 \text{ W}$) IN = > 3 mA bei 8 VDC / 1 k Ω
Standby current /	RE, RV = open contact IN = < 1 mA at 8 VDC / 1 k Ω
Switching load /	RE, RV = max. 2 W
Switching time /	RE = 40% to 60% (impulse value 1.0 and 0.1 l/Imp.) 30 to 70% (impulse value 0.00125 and 0.00311 l/Imp.) RV = 50% \pm 10% IN = 50% \pm 10%
Ambient temperature /	RE = -10°C to +60°C RV = -10°C to +70°C IN = -10°C to +70°C
Protection class /	RE = IP50 (IEC 60529) RV = IP65 (IEC 60529) IN = IP65 (IEC 60529)
Electrical connection /	RE = on plug connector with cable \varnothing 3.5 mm to \varnothing 5 mm RV = fixed cable 3 m length (2 x 0.14 mm ²) IN = plug for cable (2 x 0.35 mm ²)

Electrical Specifications of display with two selectable pulse- and analogue outputs FA:

Display /	8-character LCD with identification of the parameter, height of numbers 8 mm, flow rate (meter load) using bar indicator
Display values /	total volume, resettable volume, flow rate
Ambient temperature /	-25°C . . +70°C
Power supply /	24 VDC (6 . . 30 VDC)
Data preservation /	by non-volatile memory (EEPROM)
Protection class /	IP66 (IEC 60529)
Output versions /	Version 1: 1 potential free digital output (Rel. 1), adjustable and 1 passive analogue output 4 . . 20 mA Version 2: 2 potential free digital outputs (Rel.1 + Rel. 2) each adjustable
Analogue output /	
Power supply:	6 . . 30 VDC
Load RL:	max. (U-5) V / 0.0215 A [Ω]
Resolution:	16 Bit
Error:	max. \pm 0.2 mA
Update interval:	< 1 s
Digital output /	
Update intervall:	< 1 s
max. Voltage:	48 V DC/AC
max. Current:	50 mA
ON - resistance:	\leq 100 Ω
OFF - resistance:	\geq 10 M Ω
Insulation voltage:	> 100 V DC/AC
max. Output frequency:	200 Hz

Versions:

VZ-01 Oil Counter

max. Temperature: In case of oil counters belonging to the sizes 04M, 04 and 08 the media temperature must not exceed 60°C. And in case of sizes 15 to 50 the maximum media temperature is 130°C. Optionally, a high-temperature version up to 180°C is available.

Process connection: The VZ-01 of sizes 04M, 04 and 08 have only thread connections as per the table „Sizes“ (on the following page). The sizes 15 to 40 offer a choice between thread or flange connections.

Nominal pressure: The nominal pressure for thread connections is PN 16 while for flange connections either PN 25 or PN 40 can be selected.

Impulse emitter: See table „Sizes“ on the following page.

The electronic display FA is a top-mounted unit, that provides two selectable outputs, either as one adjustable pulse- and one additional 4 to 20 mA-analogue output or as two adjustable pulse outputs. The displayed values are total volume, resettable volume and flow rate.

Rule of thumb /

1 cSt -> 1 mm²/s -> 1 mPa.s

Viscositylines for VZ-01.04 and VZ-01.08

A = 5 mPa.s B = 50 mPa.s

C = 100 mPa.s D = 200 mPa.s

E = 500 mPa.s

Viscositylines for VZ-01.15 to VZ-01.50

A = 5 mPa.s B = 25 mPa.s

C = 50 mPa.s D = 100 mPa.s

E = 200 mPa.s F = 500 mPa.s

If the pressure drop is above 1 bar, we recommend using the next greater nominal diameter for the counter. Maximum permissible pressure drop = 3 bar.

GM-10N

Battery powered thermal Mass Flowmeter for Gases

Features

- / Standard AA battery powered
- / Touchscreen with password protection
- / Flow units changeable
- / Totalizer
- / High accuracy and dynamic
- / Extremely quick response time
- / No inflow and outflow lines required
- / Real gas calibration
- / Optional multigas
- / Optional 24 VDC supply
- / Optional regulating valve
- / Optional switching contacts

Description:

The GM-10N with its integrated touchscreen, offers thanks to autonomous operation with standard AA batteries and its insensitivity to pressure surges a highly accurate alternative to variable area flowmeters. The device has a CMOS flow sensor that enables a quick response speed due to its extremely small dimensions, while ensuring excellent accuracy. An all-metal body made of aluminium or stainless steel is equipped in its interior with a flow rectifier and subsequent resistance that divides the volume flow of gases into a defined main and an auxiliary flow. The auxiliary flow is guided through a measuring chamber in which the approximately 1 mm sensor is directly located. The sensor gets cooled by the mass flow of gas in such manner that its heat loss is proportional to the number of gas molecules flowing along regardless of their packing density. Consequently, the mass flow can be ascertained in a wide area without compensating for pressure and temperature. This principle of measurement is unique as against conventional methods like the variable area principle because no inflow and outflow lines are required. In its basic version, the GM-10N displays the standard and the total volume flow as a numerical value on its touchscreen. In addition to the numerical values, the standard volume flow is also shown graphically by a bar graph. The GM-10N can be supplied in its extended levels with additional precision regulating valve and / or adjustable switching contacts.

Application:

The GM-10N series of thermal gas mass flowmeters has been developed to replace on a longterm basis the variable area flowmeter that enjoyed a fine track-record for years for small gas flows. In contrast to this measurement system, it offers obvious advantages like higher accuracy and insensitive to pressure and temperature changes and it can be deployed even without auxiliary power supply. The device is suited for a number of various gases and covers the volume flow range up to 450 NI/min air. Considering these advantages, the GM-10N can be used in different areas of the industry like, for example, gas supply systems, semiconductor productions, welding technology, machine construction, supply

of compressed air, fuel cells, fermenters, chemical engineering, laboratories, ovens, burners, medical engineering, analyzing devices, laser technology, surface coating and so on. In the laboratory applications especially, the GM-10N is often deployed along with its optionally available integrated manual regulating valve since it permits adjustment of very low gas volume flows and maintenance of constant levels.

Versions:

GM-10N Battery powered, thermal Mass Flowmeter for Gases

Normally, the GM-10N works as a battery-powered thermal mass flowmeter displaying the standard and the total volume flow as a numerical value on its touchscreen. In addition to the numerical values, the standard volume flow is also shown graphically by a bar graph. In the next extended level, a manual regulating valve is added to the device to accurately regulate the volume flow. Optionally, the GM-10N can be supplied with electrical switching contacts with or without a regulating valve. However, in this case an external 24 VDC power supply is necessary since the battery capacity is insufficient for operating the switching outputs.

Measuring tube material: The measuring tube can be made of anodized aluminium or electropolished stainless steel depending on the media. However, the CMOS sensor is wetted and deployment of the GM-10N is therefore limited to measuring and regulating non-hostile gases. The sealing material used is FKM, optionally it can be supplied in EPDM.

Accuracy and span: There are two versions of accuracies available. The more affordable standard variant measures at an accuracy of ± 2% of full scale value (ranges > 200 NI/min ± 3% of full scale) and has a measuring span of 1:50.

The more accurate version has an accuracy of ± 1% of full scale and a measuring span of 1:100 (for units with process connection G 1/4" and measuring ranges up to 50 NI/min with real gas calibration only).

Medium: As measuring media all non-hostile and dry gases can be considered. Gases that are not listed in the ordering codes but comply with these requirements can be ordered as special medium. All devices are supplied ex-factory in real gas calibration.

Flow units: It can be chosen between a large number of standardized and normalized flow units of the Imperial, US customary and SI measuring systems (with user adjustable reference conditions). The units are selectable from the integrated menu both for the actual and the totalized flow.

Alarm functions: In the version with contacts, the GM-10N provides three configurable alarms with 5 different selectable triggers (e.g. min. alarm, max. alarm, windows alarm, overflow alarm and totalizer alarm).

Options: Alternative sealing materials, external 24 VDC power supply instead of battery-operation, a housing for switch panel mounting, separately deliverable calibration protocols and a multigas calibration (e.g. one measuring device can be used for up to 3 different gases or gas mixtures) are available as options at additional charges.

GR-02

Thermal Mass Flowmeter and Controller for Gases

Features

/ Insensitive to pressure and temp.

/ Short response times

/ Highly accurate and dynamic

/ Low pressure drop

/ Serial interface

Description:

The GR-02 series of mass flowmeter for gases has a CMOS flow sensor that is capable of measuring at very high accuracy according to the thermal principle that applies to gas flow. The measurement pick-up is located directly within the gas flow and detects the quantum of heat that the passing gas molecules carry off a heating element. With its significantly small dimensions and direct contact to the medium, the GR-02 is capable of measuring at extremely fast speeds of response time. The measuring tube can be delivered in aluminium or stainless steel where the measuring chamber is always made of plastic. This limits its use to non-hostile gases or gaseous mixtures with only low hostile content. A major advantage of the thermal measuring principle is that the volume flow can be measured and put out under standard conditions, largely independent of the process pressure and the gas temperature. Selectively, the GR-02 can be supplied as a mere flowmeter with analogue output signal or as flowmeter and controller with integrated regulating valve. In the version with valve, the flow of gas volume is regulated proportionally to an analogue input signal while this unit can also be seen as a „constant gas source“. The parameters of the PI-controller, the operating range settings, selection of media and many other features can be verified and modified through suitable Windows software over the serial RS-485 interface.

Application:

The GR-02 series represents the new generation of thermal mass flowmeters for gases. The extremely cost-effective CMOS technology combines a dependable accuracy of up to $\pm 0.3\%$ of the full scale value + $\pm 0.5\%$ of measured value, fast response times and excellent dynamics to a flowmeter and controller that offers maximum operational convenience. Considering the advantages like modular construction of the measuring system, its assembly in any position and the convenience of cleaning the measuring pick-up without elaborate recalibration, the GR-02 can be deployed in various applications

Electrical Specifications:

Supply voltage /	24 VDC (18-30 VDC) (15 VDC on request)
Power consumption /	meter max. 100 mA controller max. 250 mA
Electr. connection /	D-Sub plug 9-pole
Output signals analogue /	4...20 mA, 0...10 VDC, 0...5 VDC, 1...5 VDC, 2...10 VDC or 0...20 mA
Output signals digital /	RS-485; Modbus RTU (Slave); Lab View-VI's available; optional: Profibus DP-V0, DP-V1
Set point value input for regulator /	4...20 mA, 0...10 VDC, 0...5 VDC, 1...5 VDC, 2...10 VDC or 0...20 mA
Starting time /	<1 sec.
EMC /	EN 61326-1
Protection class /	IP 50
Software /	<ul style="list-style-type: none"> - Reading of actual values for flow and temperature. - Specification of set point values - Entering regulator parameters - Changing gases - Optional recording of measuring data through logging function

Technical Specifications:

Measuring medium /	dry, non-hostile gases (see also listing in the Ordering codes)
Accuracy /	
GR-02.x.1:	± 1.0 % of full scale value
GR-02.x.2:	± 0.3 % of full scale value + ± 0.5% of full measured value
Pressure sensitivity /	< 0.2 % per bar (typically N2)
Repeatability /	± 0.2 % of full scale value
Dynamics /	
GR-02.x.1:	1:50
GR-02.x.2:	1:100
Response time /	80 ms; controller 500 ms
In- and outflow lines /	none
Pressure /	0.2...11 bar a (controller max. 8 bar)
Temperature /	0...50°C
Temp.-sensitivity /	< 0.025% per °C
Materials /	aluminium anodized, optional stainless steel electropolished
Seals /	Viton, EPDM, optional FFKM
Mounting position /	any (above 5 bar horizontal)
Gas connection /	G 1/4"-female up to 60 NI/min, above G 1/2"-female
Testing pressure /	16 bar a
Longterm stability /	< 1% measured value / year
Leakage rate /	< 1x 10 ⁻⁶ mbar l/s He

Versions:

GR-02 Thermal Mass Flowmeter & Controller

The GR-02 is supplied as a mere flowmeter or as a flow controller with integrated regulating valve. The meter estimates the current volume flow and transmits it in the form of an analogue signal at the output. The controller functions like a „constant gas source“. The device measures the volume flow as the actual value and transmits it as analogue output. At the same time, the set point value is fed to the input of the GR-02 in the form of another analogue signal. The electronics estimate the difference in the regulation and adjust the integrated valve by means of an interface-programmable PI controller.

Accuracy and span: There are two versions of accuracies available. The more affordable standard variant measures at an accuracy of $\pm 1.0\%$ of full scale value and has a measuring span of 1:50. The more accurate version has an accuracy of $\pm 0.3\%$ of full scale value + $\pm 0.5\%$ of measured value at a span of 1:100.

Basic body and seals: The measuring tube of the GR-02 is made of aluminium or stainless steel. The CMOS sensor is however, always made of plastic and constantly wetted. The standard sealing material is Viton; optionally also EPDM is available.

Output signals: The signal pattern over which the measured volume flow can be tapped at the output of the GR-02, is either 4...20 mA, 0...20 mA, 0...5 VDC, 1...5 VDC, 0...10 VDC or 2...10 VDC.

Set point value signal for controlling function: If the GR-02 is designed as a flowmeter and controller, the set point value of the flow must be set as an analogue signal. This is either 4...20 mA, 0...20 mA, 0...5 VDC, 1...5 VDC, 0...10 VDC or 2...10 VDC. The mere flowmeter version of the GR-02 has no set point value input.

Pressure ratios in regulating function: The integrated regulating valve of the GR-02.2 as a flowmeter and controller must be set for inlet and outlet pressure. For this reason, both these values must be specified as absolute pressure in [bar].

Medium: As measuring media all non-hostile, dry gases can be considered. Gases that are not listed in the Ordering codes but comply with the requirements can be ordered as special type medium. All devices are supplied ex factory with real gas calibration.

Operating range: There are various operating ranges from 0-25 Nml/min up to 0-450 NI/min available. Customer-specific full scale values are available on request.

GS-01N

Compressed Air Counter with Switching- and Analogue-Output

Description:

The GS-01N series compressed air counter is a thermal mass flow-meter for gases according to the principle of hot-wire anemometer that is equipped with an electronic unit that has been developed specifically for applications in the field of industrial compressed air. A calorimetric measuring unit consisting of a heated and a temperature measuring resistor form the sensor component of the GS-01N. A volume of compressed air passing through the measuring tube carries off the heat from the heated resistor that is proportional to the velocity. The resulting electrical change of the heated resistor is evaluated by means of the measuring bridge and the effect of media temperature is compensated by the measuring resistance. The extremely user-friendly designed electronic unit has two outputs which can be adjusted optionally as a PNP transistor output for incorporating a limit value switch or an impulse output or as an analogue output for transmitting a 4...20 mA signal (for flow, temperature or pressure). Thus, the possible combinations of outputs for the GS-01N are:

- / **2 x NO-contacts / NC-contacts**, adjustable with regard to position and hysteresis of the setpoint or as Window function
- / **1 x NO-contact / NC-contact** and an additional analogue output (scalable) or
- / **1 x NO-contact / NC-contact** and an additional impulse output (programmable).

The rotatable 4-digit digital display on the GS-01N displays either the accumulated sum of the compressed air flow (consumption of compressed air) in Nm^3 or the current value of the flow in Nm^3/min or in Nm^3/h optically. The maximum value that can be displayed is $4000 \cdot 10^3 \text{m}^3$ where at such high values a yellow LED indicates that the displayed 4-digit value must be multiplied by the factor 1000. On pressing a button, the device can display the current media temperature and the accumulated sum after the last counter reset. Using a programming device, the display can be adjusted to let it remain switched off in RUN mode. An automatic Reset function of the totalizer can be programmed to different time intervals. In addition, the GS-01N has a minimum and a maximum memory that can store the lowest and the highest value measured until its next resetting.

Features

/ **New:**

Temperature monitoring and pressure monitoring included

/ Analogue or pulse output

/ Display of current value or total

/ Can be used as preselection counter

/ Independent of pressure and temp.

/ Max. and min. value memory

/ Low pressure drop

/ Additional temperature monitoring

Application:

Today, consumption of compressed air in machines and equipment is a cost factor that cannot be ignored at all. Due to this fact the consuming industry increasingly demands measuring devices which, on the one hand, help satisfactorily monitor consumption of compressed air and, on the other hand, do not cause additional pressure drop within the system which in turn would further escalate costs. The new compressed air counter GS-01N is our answer to this problem. It enables visual check of current consumption on a clearly readable display and, it can display the volume of compressed air consumed up to a point like a „water clock for air“ and store the value. Two programmable switching contacts trigger an alarm in the event of exceeding or falling short of a defined volume flow and, optionally, they can be programmed using window technology. It means that a defined range is considered as „good“ and, on escaping this Window alarm is sounded. Optionally, the user may avoid one of the switching outputs and, instead, opt for an impulse or analogue output or program the switching output as the preselection counter. The fact that the GS-01N is a mass flowmeter based on the thermal principle also underlines the advantages of measuring volume flow largely regardless of pressure and media temperature and implies a pressure drop in the range of only few millibars.

The accuracy of ±3% of measured value + ±0.3% of full scale value and the option of operating range up to 700 Nm³/h round off a device that pays off within the shortest span of time, not the least, due to its excellent price to performance ratio.

The integrated temperature measurement enables temperature-sensitive processes, such as drying processes, to be monitored and the production quality to be ensured. The compressed air meter thus contributes to increasing process reliability.

Versions:

GS-01N Compressed Air Counter with Switching- and Analogue-Output

The GS-01N can be supplied in 5 versions with different nominal diameters and volume flow ranges measurable by them. The available connection sizes are: G1/4", R1/2", R1", R1 1/2" and R2". The tapping ranges are in the same sequence 0 - 18 Nm³/h, 0 - 90 Nm³/h, 0 - 270 Nm³/h, 0 - 492 Nm³/h and 0 - 840 Nm³/h. The sizes G1/4" and R1/2" are also available for argon, CO₂ and nitrogen.

GM-50

Air Velocity Transmitter

Features

- / Operating ranges up to 75 m/s
(15000 ft/min) in 8 levels
- / Optional LED display
- / 6 different mounting lengths
- / 4...20 mA output
- / Digital filter

Description:

The GM-50 series of air velocity transmitter is the ideal instrument for measuring air velocities in large pipes and ducts. The device uses a mass flow sensor that allows accurate measurement at different flow velocities and temperatures. The rate of cooling in a heated measuring resistance is estimated which is directly proportional to the velocity of flow streaming along. At the output of the GM-50 the measured value can be tapped in the form of a 4 to 20 mA signal selectively in 3- or 4-wire system. In addition, the device has an optionally available LED display on which the measured value is displayed digitally, and an adjustable filter that attenuates the output with the time element of 0.5 to 15 seconds. The result is that a possible turbulent, restive flow does not lead to strong fluctuations in the output and the display. Since the GM-50 as a mass flowmeter always refers its measured values to air pressure and, in this respect, it is calibrated at factory to a standard status, it is possible to recalibrate the sensor to another pressure within the framework of parameterization.

Application:

The flow velocity of air or emission flow is often measured in the air-conditioning, ventilation and building technologies. Modern sensor elements of the GM-50 enable accurate and convenient measurement regardless of the air temperature at an enormously large span of operating range. Outmoded measuring instruments such as apertures, dynamic pressure probes or tubes can be conveniently replaced by the GM-50 with its principle of thermal mass flow measurement. In the course of commissioning, the user has a choice of eight different operating ranges between 0...1.25 and 0...75 m/s respectively 0...250 and 0...15000 ft/min, can customize to existing air pressure and adapt the 4...20 mA value of the output to his evaluator electronics. All settings for the device are performed through two keys and a potentiometer extremely easily.

Technical Specifications:

Media /	clean air and compatible, non-flammable gases
Operating range in m/s /	0..1,25; 0..2,5; 0..5; 0..10;
